Information Communication Technology (ICT) has remained a catalyst issue of national advancement and development. Information, as powerful, is effectively an infinite resource and a vital tool needed for the development of all sectors in any nation. It is therefore, imperative that application in libraries would go a long way in satisfying the information need of the citizens. It is worthy of note, that the emergence of ICT has impacted on the quality of information provided through libraries. It also enabled proper and adequate provision of library services to library users from all disciplines. In this 21st century, the drastic role of ICT in library operations cannot be over emphasized. Many library routines and operations that were initially performed manually are now being converted to computerized operations which means, applications of ICT techniques to providing better and faster services to the end users. A nation without functional libraries and information centres may lack access to information that would hinder sustainable development. In this era of globalization, in which the world is connected, information gains its power through permanent storage and distribution, which could be achieved through ICT. The use of ICT improves access to digital information, narrows down the digital divide and also improves standard of living. Adoption of ICT in libraries is a way of improving information services provided in libraries. This is an era, when people can access timely information with ease, and this can only be done through application of ICT to library services. It is also a way of contributing to
