Dr.V.S.Krishna Govt. Degree College (Autonomous), Visakhapatnam 8th Board of Studies: Scptcmber-2022 Pre-Approval form

Subject: Physics(Main)

Department: Physics

In pursuance of conferment of Autonomous status to Dr.V.S.Krishna Govt. Degree College(A). Visakhapatnam by the UGC vide letter No.F22-I/2011 (AC) dated 20.07.2011 from Dr. Manju Singh. Joint Secretary, UGC, New Delhi and Proceedings No. C-II (CDC) /Dr. VSK.Govt.College/BOS/2020 dt.03.08.2022 of the Vice-Chancellor, Andhra University, Visakhapatnam. the 8th Board of Studies in Physics(Main) Subject is conducted on

28.09.2022 at 10:00 AM with the following members. The Changes were implemented from 2022-23 academic year onwards. The syllabus also is ratified.

MEMBER	NAME& DESIGNATION	SIGNATURE
Head of the Department (Chairman)	Dr. CVSS. Sastry	Juess
Faculty Members	Dr. CVSS. Sastry Dr. P. Latha Sri NVS Bhagavan Sri B. Nageswararao Dr. T. Swarna Latha Sri H. Sudheer	Kerbly BOR H. Suseres
Subject Expert (University Nominee)	Prof. D.S.V.V.D. Prasad, Dept of Physics, Andhra University.	Aswal 28/9/2002
Subject Experts (from outside the parent university) Representative Member	Dr. D.B. Radha Krishna, HoD in Physics, Govt. College for Women (A), Srikakulam, Dr.B.R. Ambedkar University, Srikakulam Sri. Esub Basha Shaik, Lecturer in Physics, Govt. College (A), Rajamahendravaram, E.G. Dist., AKNU	PA benn 28/5/22 Shi Ends Beele. 25/9/22
From Industry / Corporate / Allied Area relating to placement	Visakhapatnam	Sins Ist.
Member from Alumni	Sri Bandi Anand Rohit Visakhapatnam	B. Amand Rokit
Coordinator, IQAC	Dr. Ch. Lalitha	fatile
Academic Coordinator and member secretary, Academic Council	Dr. P. Latha	Inlin
Principal and Chairperson, Academic Council	Dr. I. Vijayababu	o.min.

ESOLUTIONS ADOPTED BY BOARD OF STUDIES IN BSC. PHYSICS(MAIN) PROGRAM

ne Board of studies in Physics met on 28-09-2022 and resolved the following

- 1. To continue Autonomous Education system in CBCS pattern as suggested by APSCHE as per the Staff council proceedings and to implement the Physics syllabus for the admitted batch of I year Degree students 2022-2023 onwards in accordance with the directives of APCCE, AP, Mangalagiri. 2. To implement the guidelines of Academic council.
- To approve the blue print and Model Question papers for First, Second, Third, Fourth, fifth and 3.
- To approve the newly framed syllabus in BSC. Physics (Mains) program with effect from the 2022-4.
- 2023 for the admitted Batch. To approve the Syllabus, Blueprint, Model Question Papers, Work load and Credits for Skill developed Courses in Physics namely Solar Physics and Electrical Appliances. 5.
- To approve weekly workload and credits as proposed in the approved syllabus.
- To approve the Evaluation scheme i.e. External Evaluation for 75 marks and Internal Evaluation for 6.
- 25 Marks. Out of 25 marks for Internal Evaluation, 20 marks are assessed on the basis of two 7. Internal examinations and 5 marks are assessed by conduct of assignments / Project / Seminar / ... To approve conduct of seminars, workshops, symposia, field visits, quiz competitions etc.
- 8.
- To improve the quality of Curriculum as per the NAAC norms.
- 10. To encourage the students to participate in community centric activities. 11. To encourage the students to get trained in JKC / Life skills / Communication skills etc.

REVISED SYLLABUS OF B.Sc. PHYSICS (FOR MATHEMATICS COMBINATIONS) UNDER CBCS FRAMEWORK WITH EFFECT FROM 2022-2023

PROGRAMME: THREE-YEAR B.Sc. Physics programme

(Physics for Mathematics Combinations)

(With Learning Outcomes, Unit-wise Syllabus, References, Co-curricular Activities & Model Q.P.) For Fifteen Courses of 1, 2, 3, 4 & 5 Semesters) (To be Implemented from 2022-23 Academic Year)

Dr. V.S. KRISHNA GOVERNMENT COLLEGE (A) , VISAKHAPATNAM B.Sc. Hons PHYSICS SYLLABUS UNDER CBCS [For Mathematics combinations] w.e.f. 2022-23 (Revised in September 2022)

PROGRAM SPECIFIC OUTCOMES:

After the completion of the B.Sc. Honors Physics Program (3-year program), the student will be able to

- **PSO 1:** Gain not only adequate knowledge in basic topics of the Physics subject like Classical Mechanics (Newtonian + Special Theory of relativity), Optics, Heat, Electricity & Magnetism, Electronics, Modern Physics etc but also a fundamental level exposure in advanced topics like Mathematical Methods in Physics, Quantum Mechanics, Solid State Physics, Statistical Mechanics, Electro Magnetic Theory so that it will be comfortable while doing Post Graduation in Physics.
- **PSO 2:** Acquire diverse practical technical oriented skills through various Skill Enhancement based Elective Courses not only related to Physics subject but also to the other science & technical subjects so that it will be very beneficial in getting various technical related jobs.
- **PSO 3:** Develop knowledge in very Advanced Topics of physics through Disciplined Specific Electives (Elective Courses) which are included in the syllabus with an intention to fill the gap between the Under graduate and the Post Graduate Curricula.
- **PSO 4:** Get enough exposure in the subjects of Mathematics & Chemistry which are very Closely related to the to the fundamental aspects of Physics so that it will be very useful in Physics courses as well as in the skill Enhancement Courses.
- **PSO 5:** Get enough practical exposure & experience through Lab sessions in all the courses so that it will be helpful not only in understanding physics but also in understanding many Technical aspects of the Skill Enhancement Courses.
- **PSO 6:** Face confidently any competitive exam, Interview, Group discussions etc because of training they get through various types of Assessments (Online Quizzes, oral presentations, seminars, problem solving etc)

- **PSO 7:** Get exposed to society needs, existing problems it is facing and an opportunity to think about reasonable solutions for the problems while doing the Community Service project (CSP) at the end of the II semester and before the Commencement of the III semester for FOUR weeks.
- **PSO 8:** Get acquainted with Job skills as well as Entrepreneurship skills through Internship in two stages, the first one for 8 weeks after 2rd year (IV semester) and before the commencement of 3rd year (V semester) and the second one for 6 months during the VI semester.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM B.Sc. Honors PHYSICS SYLLABUS UNDER CBCS [For Mathematics Combination only]

w.e.f. 2022-23 (Revised in August 2022)

List of ELECTIVE COURSES for the V- SEMESTER BSC PHYSICS Program

Sl.no.	Category – A	Category – B	Category - C
1	Low Temperature Physics /	Solar Energy / EB1	Analytical
	EA1		Dynamics / EC1
2	Nano Materials &	Renewable Energy &	Nuclear & Particle
	Applications / EA2	Energy Harvesting / EB2	Physics / EC2
3	Communication Electronics /	Atmospheric Physics /	Advanced
	EA3	EB3	Mathematics / EC3

The Student of BSC Physics Program in the V semester has to choose any two papers from each of the above categories. Therefore, the total number of Elective courses the student has to complete is six. Each of the Papers has 4 credits for theory and 1 credit for Practical. The number of Theory classes per week for each paper is 4 hrs.

Generic Electives (GE) (Minor Physics) All the courses have 5 credits with 4 for other Departments/Disciplines credits of theory and 1 credit of practical or 4 credits of theory and 1 credit of Tutorials.

Elective papers for other B.Sc. programs other than B.Sc. Physics

- 1. Mechanics + Lab
- 2. Electricity and Magnetism+ Lab
- 3. Thermal Physics and Statistical Mechanics + Lab
- 4. Waves and Optics + Lab
- 5. Embedded Systems –Introduction of Microcontroller + Lab
- 6. Nuclear and Particle Physics + Tutorials
- 7. Digital, Analog and Instrumentation + Lab
- 8. Elements of Modern Physics + Lab
- 9. Mathematical Physics + Lab
- 10. Solid State Physics +Lab
- 11. Quantum Mechanics + Lab

List of LIFE SKILL courses

- 1. Analytical Skills
- 2. Basic Computer Applications
- 3. Elementary Statistics
- 4. Entrepreneurship Development
- **5.** Environmental Education
- 6. Health and Hygiene
- 7. Human Values Professional Ethics as part of Life skill courses
- **8.** Indian Culture and Science
- 9. Information and Communication Technology
- 10. Personality Enhancement and Leadership

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM

B.Sc. PHYSICS SYLLABUS UNDER CBCS

For Mathematics Combinations

[2022-23 Batch onwards]

I Year B.Sc. Physics: I Semester

CC-1: MECHANICS

Work load:60 hrs per semester

4 hrs/week

Course outcomes:

On successful completion of this course, the students will be able to:

- Understand Newton's laws of motion, motion of many particle systems, laws of conservation of Linear Momentum, work & Energy and also about Collisions
- Apply the rotational kinematic relations, and Conservation of angular Momentum, symmetries of Moment of Inertia for the Combined Rotation Translation Motion
- Comprehend the general characteristics of central forces and the application of Kepler's laws to describe the motion of planets and satellite in circular orbit through the study of law of Gravitation and also about the basic aspects of Elasticity & Fluid Motion
- Get acquainted with the basics of Oscillatory motion and the motion w.r.t. the Non-inertial frames of Reference
- Understand postulates of Special theory of relativity and its consequences such as length contraction, time dilation, relativistic mass and mass-energy equivalence.

Learning Objectives:

- 1. To understand Newton's laws of motion and the three conservation laws of motion
- 2. To understand the laws of Rotational dynamics and apply them to Combined Rotation Translation motion
- 3. To understand the central force motion and basic aspects of Elasticity & Fluid motion
- 4. To understand the basic aspects of Oscillatory motion and about the motion w.r.t. Noninertial Frames
- 5. To understand both the Kinematic as well as Dynamical aspects of Relativistic Mechanics

PHYSICS-CC- 1: MECHANICS Credits – Theory: 4 Practical: 1

Skill Component:

UNIT -I:

- 1. To apply and analyze the Newton's laws of motion & the law of conservation of Linear momentum in various daily applications (Balloons, Rocket motion etc)
- 2. Measurement of Earth's acceleration due to gravity
- 3. Apply & analyze the law of conservation of energy in Physical Phenomena

UNIT – II :

- 1. Calculation of center of mass of an object
- 2. Apply & analyze the law of Conservation of Angular Momentum in daily applications like Turn table, in Gym, skating etc
- 3. Measurement of Moment of inertia of regular objects

UNIT – III

- 1. Measurement of Youngs modulus & Rigidity modulus of a material
- 2. Measurement of viscosity of a liquid
- *3.* Analyzing & observing the motion of Heavenly bodies, Rockets & satellites **UNIT IV**
 - 1. Measurement of spring constants
 - 2. Observe & analyze the situations where the phenomenon of Resonance arises
- 3. Analyze the effects of Coriolis forces on Water bodies, Air, and other massive bodies etc UNIT V
 - 1. Apply the Mass Energy Equivalence in calculations
 - 2. Analyze and apply the consequences of the Special Theory of Relativity

UNIT-I:

NEWTONIAN MECHANICS

1. Fundamentals of Dynamics: Reference frames. Inertial frames; Review of Newton's Laws of Motion. Galilean transformations; Galilean invariance. Momentum of variable-mass system: motion of rocket. Motion of a projectile in Uniform gravitational field Dynamics of a system of particles. Centre of Mass. Principle of conservation of momentum. Impulse.

(6 Lectures)

2. Work and Energy: Work and Kinetic Energy Theorem. Conservative and nonconservative forces. Potential Energy. Energy diagram. Stable and unstable equilibrium. Elastic potential energy. Force as gradient of potential energy. Work & Potential energy. Work done by non- conservative forces. Law of conservation of Energy. (6 Lectures)

Unit-II:

3.Collisions: Elastic and inelastic collisions between particles. Centre of Mass and

Laboratory frames, Rutherford alpha particle scattering experiment – scattering cross section expression derivation (5 Lectures)

4.Rotational Dynamics: Angular momentum of a particle and system of particles Torque. Principle of conservation of angular momentum. Rotation about a fixed axis. Moment of Inertia. Calculation of moment of inertia for rectangular, cylindrical and spherical bodies. Kinetic energy of rotation and motion involving both Translation and Rotation, Euler's equations of motion – Torque free motion. (10 Lectures)

UNIT-III:

5.Elasticity: Relation between Elastic constants. Twisting torque on a Cylinder or Wire.

(3 Lectures)

6.Fluid Motion: Kinematics of Moving Fluids: Poiseuille's Equation for Flow of a liquid through a Capillary tube. (2 Lectures)

7. Gravitation and Central Force Motion: Law of gravitation, Gravitational Potential Inertial and gravitational mass, Potential and field due to spherical shell and solid sphere, Motion of a particle under a central force field, Two-body problem and its reduction to one-body problem and its solution, The energy equation and energy diagram, Kepler's laws, Satellites in circular orbits and applications and Geosynchronous orbits, Weightlessness, Basic ideas of Global positioning system (GPS). (8 Lectures)

UNIT – IV OSCILLATIONS & NON-INERTIAL FRAMES

8.Oscillations: SHM: Simple Harmonic Oscillations. Differential equation of SHM and its solution. Kinetic energy, potential energy, total energy and their time-average values. Damped oscillation. Forced oscillations: Transient and steady states; Resonance, sharpness of resonance; power dissipation and Quality Factor. (7

Lectures)

9.Non-Inertial Systems: Non-inertial frames and fictitious forces, Uniformly rotating frame. Laws of Physics in rotating coordinate systems. Centrifugal force. Coriolis force and its applications. Components of Velocity and Acceleration in Cylindrical and Spherical Coordinate Systems.

(3 Lectures)

UNIT – V

SPECIAL THEORY OF RELATIVITY

10. Special Theory of Relativity: Michelson-Morley Experiment and its outcome. Postulates

of Special Theory of Relativity. Lorentz Transformations. Simultaneity and order of events. Lorentz contraction. Time dilation. Relativistic transformation of velocity, frequency and wave number. Relativistic addition of velocities. Variation of mass with velocity. Massless Particles. Mass- energy Equivalence. Relativistic Doppler effect. Relativistic Kinematics. Transformation of Energy and Momentum. (10 Lectures)

CC-1 LAB – Mechanics Lab - Credits: 1 – Hours: 2 hrs/week

List of Experiments

- Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.
- 2. To study the random error in observations.
- 3. To determine the height of a building using a Sextant.
- 4. To study the Motion of Spring and calculate (a) Spring constant, (b) **g** and (c) Modulus of rigidity.
- 5. To determine the Moment of Inertia of a Flywheel.
- 6. To determine g and velocity for a freely falling body using Digital Timing Technique
- 7. To determine Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).
- 8. To determine the Young's Modulus of a Wire by Optical Lever Method.
- 9. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
- 10. To determine the elastic Constants of a wire by Searle's method.
- 11. To determine the value of g using Bar Pendulum.
- 12. To determine the value of g using Kater's Pendulum.

Dr. V.S. Krishna Government Degree College (A) , Visakhapatnam BSc PHYSICS MODEL PAPER FOR I SEMESTER

MECHANICS – CC-1

SECTION -A

Answer any <u>FIVE</u> of the following:

5x5=25 Marks

1. Show and prove the law of conservation of Linear Momentum for a system of Particles.

2. Explain about Conservative forces and Potential energy.

3. Derive the expressions for the final velocities of the particles undergoing a perfectly elastic collision.

4. Find the moments and products of Inertia of a uniform square plate in the first quadrant of the XY plane with one corner at the origin.

5. A planet revolves around the sun in an Elliptic orbit with Maximum and Minimum speeds to be 18.3km/s and 17.7km/s respectively. Find the eccentricity of the orbit.

6. Derive Poiseuille's equation for flow of a liquid through a capillary tube using Dimensional analysis.

7. Explain about Length Contraction in Special Theory of Relativity.

8. If the total energy of a particle is three times its Rest mass energy , find the speed of the particle.

9. What fraction of the total Energy is kinetic and what fraction is potential when the displacement is one half of amplitude in a Simple Harmonic motion.

10. Derive the expressions for the Velocity and Acceleration vectors in Spherical polar coordinates.

SECTION -B

5x10=50

Answer <u>ALL</u> of the following:

11. Obtain the expression for the speed of a Rocket projected from the Earth as a function of time.

OR

State and prove the Conservation law of Energy and the Transformation law For Kinetic Energy for a system of particles

12. Derive the expression for the differential cross section for the Alpha particles

The Rutherford Alpha ray Scattering experiment.

OR

Explain the Torque free Motion of a Rigid body by solving Euler's equations Of motion.

13. Derive the relation between the Elastic constants of the material of a solid.

OR

State Kepler's laws of Planetary motion. Prove the Kepler's first law of Planetary motion.

14. Derive the equation of motion for a Simple Harmonic Oscillator and obtain its solution.

OR

Derive the expression for the Coriolis force on an object moving on the surface of the earth. Explain when and where it becomes zero and where it becomes maximum.

15. State the postulates of the Special Theory of Relativity and derive the Lorentz Transformation equations of motion.

OR

Explain how mass changes with the speed of the body according to Special Theory of Relativity. Derive the Einstein's Mass- Energy Equivalence equation .

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM Honors PHYSICS SYLLABUS UNDER CBCS

For Mathematics Combinations

[2020-21 Batch onwards]

I Year B.Sc.-Hons Physics: I Semester

CC-2: WAVES & OPTICS

Work load:60 hrs per semester

4 hrs/week

Course outcomes:

On successful completion of this course, the student will be able to:

CO-1: Understand the basics of the Superposition of Collinear & Perpendicular Harmonic Oscillations and also about the Wave motion.

CO-2: Get acquainted with the theory of velocity of waves and also with the superposition of Harmonic Waves.

CO-3: Explain about the Electromagnetic nature of the Light and the phenomenon of Interference and also about the formation of Interference fringes in thin films as well as about the formation of Newton's rings.

CO-4: Describe the construction and the working of the Michelson Interferometer & Fabry-perot Interferometer and also about the Fraunhofer Diffraction patterns due to single slit, Circular aperture as well as diffraction Grating.

CO-5: Apply the basic mathematical principles of Diffraction to Explain Fresnel Diffraction Patterns due to a straight edge, slit and a wire and comprehend the basic principles Holography *Learning Objectives:*

- 1. To understand Harmonic oscillatory motion & wave motion
- 2. To comprehend the superposition of harmonic waves and also velocity of waves
- 3. To understand the Electromagnetic nature of the Light and the phenomenon of Interference
- 4. To understand the construction & working of various Interferometers and also the formation of Fraunhofer Diffraction patterns due to various objects
- 5. To understand the basic mathematical principles of Diffraction and the formation of Fresnel Diffraction patterns due to various objects.

Skill Component :

UNIT -I:

- 1. Obtain Lissajous figures with CRO
- 2. Analyze & apply the Superposition principle of Waves

UNIT – II :

- 1. Measurement of speed of mechanical waves in strings, speed of sound in air etc
- 2. Apply & analyze the superposition principle, Phenomenon of Beats in sound waves
- 3. Observe & analyze the situations where phase and Group velocities of waves arises

UNIT – III :

- 1. Measurement of wavelength of light from a source
- 2. Adjustments of Spectrometer, Telescopes, Microscopes etc
- 3. Observe & analyze the situations involving the phenomenon of the Interference of the light

(Colours of thin oil films, Butterfly wings etc)

UNIT – IV:

- 1. Analyze & observe the Diffraction effects of the Light
- 2. Measurement of the Resolving power of a Telescope
- 3. Determination of light from a source using a Diffraction grating.

UNIT – V:

- 1. Construction of Fresnel zone plate
- 2. Observe & analyze the effects of Fresnel Diffraction
- 3. Develop the art of thinking in applying Holography

BSC PHYSICS- CC- 2: WAVES AND OPTICS

(Credits: Theory-04, Practicals-01) Theory: 60 Lectures

UNIT - I

1.Superposition of Collinear & Perpendicular Harmonic oscillations: Linearity and Superposition Principle. Superposition of two collinear oscillations having (1) equal frequencies and (2) different frequencies (Beats). Superposition of N collinear Harmonic Oscillations with (1) equal phase differences and (2) equal frequency differences. Graphical and Analytical Methods. Lissajous Figures with equal an unequal frequency and their uses.

(7 Lectures)

2.Wave Motion: Plane and Spherical Waves. Longitudinal and Transverse Waves. Plane Progressive (Travelling) Waves. Wave Equation. Particle and Wave Velocities. Differential Wave Equation. Pressure of a Longitudinal Wave. Energy Transport. Intensity of Wave. Water Waves: Ripple and Gravity Waves.
 (4 Lectures)

UNIT – II

3.Velocity of Waves: Velocity of Transverse Vibrations of Stretched Strings. Velocity of Longitudinal Waves in a Fluid in a Pipe. Newton's Formula for Velocity of Sound.
 Laplace's Correction. (6 Lectures)

4.Superposition of Two Harmonic Waves: Standing (Stationary) Waves in a String: Fixed and Free Ends. Analytical Treatment. Phase and Group Velocities. Changes with respect to Position and Time. Energy of Vibrating String. Transfer of Energy.

Normal Modes of Stretched Strings. Plucked and Struck Strings. Melde's Experiment. Longitudinal Standing Waves and Normal Modes. Open and Closed Pipes. Superposition of N Harmonic Waves. (7 Lectures)

UNIT – III

5. Wave Optics: Electromagnetic nature of light. Definition and properties of wave front.Huygens Principle. Temporal and Spatial Coherence (3 Lectures)

6. Interference: Division of amplitude and wavefront. Young's double slit experiment.

Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings:

Measurement of wavelength and refractive index.

(9 Lectures)

UNIT - IV

7. Interferometers: Michelson Interferometer-(1) Idea of form of fringes (Notheory required),
 Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, and (5) Visibility
 of Fringes. Fabry-Perot interferometer. (6 Lectures)

8. Fraunhofer Diffraction: Kirchhoff's Integral Theorem, Fresnel-Kirchhoff's Integral formula. (Qualitative discussion only)

Single slit, Circular aperture, Resolving Power of a telescope. Double slit. Multiple slits. Diffractiongrating. Resolving power of grating.(8 Lectures)

UNIT – V

9. Fresnel Diffraction: Fresnel's Assumptions. Fresnel's Half-Period Zones for Plane Wave.
Explanation of Rectilinear Propagation of Light. Theory of a Zone Plate: Multiple Foci of a Zone
Plate. Fresnel's Integral, Fresnel diffraction pattern of a straight edge, a slit and a wire. (7 Lectures)
10. Holography: Principle of Holography. Recording and Reconstruction Method. Theory of
Holography as Interference between two Plane Waves. Point source holograms. (3 Lectures)

BSC PHYSICS - CC 2 LAB- Waves 7 Optics LAB – Credits: 01 – Hours: 02/ week 30 Lectures

List of Experiments:

- 1. To determine the frequency of an electric tuning fork by Melde's experiment and verify $\lambda^2 T$ law.
- 2. To investigate the motion of coupled oscillators.
- 3. To study Lissajous Figures.
- 4. Familiarization with: Schuster's focusing; determination of angle of prism.
- 5. To determine refractive index of the Material of a prism using sodium source.
- 6. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
- 7. To determine the wavelength of sodium source using Michelson's interferometer.
- 8. To determine wavelength of sodium light using Fresnel Biprism.
- 9. To determine wavelength of sodium light using Newton's Rings.
- 10. To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped Film.
- 11. To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
- 12. To determine dispersive power and resolving power of a plane diffraction grating.

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam Hons PHYSICS MODEL PAPER FOR I SEMESTER

WAVES & OPTICS – CC-2

SECTION -A

Answer any <u>FIVE</u> of the following :

5x5=25

1. Explain the Linearity and the Superposition principles of Harmonic Oscillations.

2. Explain the term intensity of a Harmonic wave and derive an expression for it.

3. Compare the speeds of sound in Hydrogen and carbon dioxide .The ratio of Specific heats of hydrogen and Carbon dioxide are respectively 1.4 and 1.3.

4. Distinguish between Phase and group velocities.

5. write the differences between the Spatial and the Temporal coherence of Light.

6. A mixture of waves of wave lengths range 5800 A^0 to 3500 A^0 is allowed to fall normally on a thin film of air of thickness 0.2945 μm . What is the colour shown in reflection by the Film.

7. A transparent film of glass of Refractive index 1.5 is introduced in the path of one of the interfering beams of Michelson Interferometer which is illuminated with light of wavelength $4800 A^0$. This causes 500 dark fringes to sweep across the field. Determine the thickness of the film.

8. A grating has got 6000 lines/cm on its surface. Find the Angular separation between the two sodium lines of wavelength 589 nm and 589.6 nm in the second order spectrum produced by the Grating.

9. Draw the Intensity distribution diagram of Fresnel Diffraction pattern at a straight edge and explain it.

10. Write any five applications of Holography.

SECTION-B

Answer any <u>FIVE</u> of the following:

5x10=50

11. Explain in detail about the resultant motion due to two mutually perpendicular simple Harmonic Oscillations having same frequency.

OR

Derive the Wave Equation for a Harmonic Wave and explain about its general Solution and the physical significance of the solution.

12. Derive an expression for the speed of Transverse waves in a stretched string

Explain about the Laplace correction for the Newton's expression for the Speed of sound in air.

OR

Derive the expression for the Energy of a vibrating stretched string.

13. Explain the Construction of the Fresnel Biprism . explain about the formation

Of interference Fringes and the method of determination of wavelength.

OR

Explain the construction of the Newton's rings apparatus and explain about the formation of Interference Fringes. Derive the expressions for the diameters of the Newton's rings.

14. Explain the construction and working of Michel son Interferometer to determine the wavelength of the Light from the source.

OR

Explain the formation of Fraunhofer Diffraction due to a Single slit illuminated by a Monochromatic Light.

15. Explain the construction and the working of a Zone plate. Write the differences between a Zone plate and a convex lens.

OR

Explain about Recording of a Hologram and the Reconstruction of Three dimensional image of an object from the Hologram with neat diagrams.

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam Revised CBCS w.e.f. 2022-23 SKILL DEVELOPMENT COURSES

SCIENCE STREAM

Syllabus of ELECTRICAL APPLIANCES

Total 30 hrs (02h/week),

Learning Outcomes:

By successful completion of the course, students will be able to:

- 1. Acquire necessary skills/hand on experience/ working knowledge on multimeters, galvanometers, ammeters, voltmeters, ac/dc generators, motors, transformers, single phase and three phase connections, basics of electrical wiring with electrical protection devices.
- 2. Understand the working principles of different household domestic appliances.
- 3. Check the electrical connections at house-hold but will also learn the skill to repair the electrical appliances for the general troubleshoots and wiring faults.

SYLLABUS:

UNIT-I

Voltage, Current, Resistance, Capacitance, Inductance, Electrical conductors and Insulators, Ohm's law, Series and parallel combinations of resistors, Galvanometer, Ammeter, Voltmeter, Multimeter, Transformers, Electrical energy, Power, Kilowatt hour (kWh), consumption of electrical power

UNIT-II

Direct current and alternating current, RMS and peak values, Power factor, Single phase and three phase connections, Basics of House wiring, Star and delta connection, Electric shock, First aid for electric shock, Overloading, Earthing and its necessity, Short circuiting, Fuses, MCB, ELCB, Insulation, Inverter, UPS

UNIT-III

Principles of working, parts and servicing of Electric fan, Electric Iron box, Water heater; Induction heater, Microwave oven; Refrigerator, Concept of illumination, Electric bulbs, CFL, LED lights, Energy efficiency in electrical appliances, IS codes & IE codes.

Co-curricular Activities (Hands on Exercises): (04 hrs)

[Any four of the following may be taken up]

- Studying the electrical performance and power consumption of a given number of bulbs 1. connected in series and parallel circuits.
- Measuring parameters in combinational DC circuits by applying Ohm's Law for different resistor 2. values and voltage sources

(10 hrs)

(10 hrs)

(6 hrs)

02 Credits & Max Marks :50

- 3. Awareness of electrical safety tools and rescue of person in contact with live wire.
- 4. Checking the specific gravity of lead acid batteries in home UPS and topping-up with distilled water.
- 5. Identifying Phase, Neutral and Earth on power sockets.
- 6. Identifying primary and secondary windings and measuring primary and secondary voltages in various types of transformers.
- 7. Observing the working of transformer under no-load and full load conditions.
- 8. Observing the response of inductor and capacitor with DC and AC sources.
- 9. Observing the connections of elements and identify current flow and voltage drops.
- 10. Studying electrical circuit protection using MCBs, ELCBs
- 11. Assignments, Model exam etc.

Reference Books:

- 1. A Text book on Electrical Technology, B.L. Theraja, S. Chand& Co.,
- 2. A Text book on Electrical Technology, A.K. Theraja.
- 3. Performance and design of AC machines, M.G. Say, ELBS Edn.,
- 4. Handbook of Repair & Maintenance of domestic electronics appliances; BPB Publications
- 5. Consumer Electronics, S.P. Bali, Pearson
- 6. Domestic Appliances Servicing, K.P. Anwar, Scholar Institute Publications

MODEL QUESTION PAPER

Max. Marks: 50

Time: 1¹/₂ *hrs* (90 *Minutes*)

SECTION- A

(4x5M=20 Marks)

Answer any four questions. Each answer carries 5 marks (At least 1 question should be given from each Unit)

- 1. Explain ohm's law.
- 2. Write the differences between an Ammeter and a Voltmeter.
- 3. Write the differences between AC and DC currents.
- 4. Explain about First aid for the Electric shock.
- 5. What is Earthing? Write its necessity.
- 6. Write the components of Electric iron box and write the principle of its working.
- 7. Explain the concept of illumination.
- 8. Explain about Energy efficiency of Electrical appliances.

SECTION B (3x10M = 30 Marks)

Answer any three questions. Each answer carries 10 marks (At least 1 question should be given from each Unit)

- 9. Explain the construction and working of a Transformer
- 10. Explain in detail with an example about the Electric consumption.
- 11. Explain about star and delta connections with neat diagrams.
- 12. Explain about the principle, construction and working of an electric fan.
- 13. Explain the principle, construction and the working of CFLs.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS

For Mathematics Combinations

[2022-23 Batch onwards]

I Year B.Sc.-Physics: II Semester

CC-3: MATHEMATICALPHYSICS

Work load:60 hrs per semester

4 hrs/week

Course outcomes:

On successful completion of this course, the student will be able to:

CO-1: Solve various First & second order ordinary differential equations and also some

problems with various constraints using Lagrangian multiplier method

CO-2: Get acquainted with the basics of Scalar &Vector Fields and also with the basics of Vector Differentiation in cartesian as well as Orthogonal curvilinear coordinates

CO-3: Apply Gauss's Divergence, Stoke's and Green's theorems to solve various problems involving vector Integration

CO-4: Work out the problems involving Fourier series and special integrals like Gamma integral, beta integral

CO-5: Get acquainted with the properties of Delta function and also about the Theory of Errors as well as about the elementary aspects of Probability distribution functions **Learning Objectives:**

- 1. To learn how to solve First & Second order Differential equations and also Lagrangian Multiplier method
- 2. To understand Scalar & Vector fields and also the basics of Vector Differentiation in Cartesian and Orthogonal curvilinear coordinates
- 3. To apply Gauss divergence, Stokes and Greens theorems to solve various problems involving Vector Integration
- 4. To work out the problems involving Fourier series, Gamma and Beta integrals
- 5. To understand Dirac Delta Function, Theory of errors & Probability Distribution Functions

Skill Component :

UNIT – I :

- 1. Plotting of various typical functions using analytical & computational techniques
- 2. Obtain solutions of Differential equations
- 3. Solve differential equations involving constraints

UNIT – II & III:

- 1. Geometrical interpretations of Vector algebra and Vector calculations
- 2. Applying Non cartesian coordinates to Physics problems

UNIT – IV & V:

- 1. Apply & analyze the Fourier Analysis for Physics applications (Amplifiers in Electronics)
- 2. Learn to apply & analyze the statistical probability theories for Real life Physics

BSC PHYSICS-CC 3: MATHEMATICAL PHYSICS-I

(Credits: Theory-04, Practicals-01) Theory: 60 Lectures

The emphasis of course is on applications in solving problems of interest to physicists.

The students are to be examined entirely on the basis of problems, seen and unseen.

UNIT - I

- Recapitulation: Limits, continuity, average and instantaneous quantities, differentiation. Plotting functions, Intuitive ideas of continuous, differentiable, etc. functions and plotting of curves. Approximation: Taylor and binomial series (statements only). (2 Lectures)
- 2. First Order and Second Order Differential equations: First Order Differential Equations and Integrating Factor. Homogeneous Equations with constant coefficients. Wronskian and general solution. Statement of existence and Uniqueness Theorem for Initial Value Problems.
 Particular Integral. (9 Lectures)

3.Calculus of functions of more than one variable: Partial derivatives, exact and inexact differentials. Integrating factor, with simple illustration. Constrained Maximization using Lagrange Multipliers. (3 Lectures)

UNIT - II

4. Vector Algebra:

Recapitulation of vectors: Properties of vectors under rotations. Scalar product and its invariance under rotations. Vector product, Scalar triple product and their interpretation in terms of area and volume respectively. Scalar and Vector fields. (2 Lectures)

5.Vector Differentiation: Directional derivatives and normal derivative. Gradient of a scalar field and its geometrical interpretation. Divergence and curl of a vector field. Del and Laplacian operators.
 Vector identities. (6 Lectures)

6. Orthogonal Curvilinear Coordinates:

Orthogonal Curvilinear Coordinates. Derivation of Gradient, Divergence, Curl andLaplacian in Cartesian, Spherical and Cylindrical Coordinate Systems.(3 Lectures)

UNIT – III

7. Vector Integration: Ordinary Integrals of Vectors. Multiple integrals, Jacobian. Notion of infinitesimal line, surface and volume elements. Line, surface and volume integrals of Vector fields. Flux of a vector field. Gauss' divergence theorem, Green's and Stokes Theorems and their applications (no rigorous proofs). (12 Lectures)

UNIT – IV

8.Fourier Series: Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions. Application. Summing of Infinite Series. Term-by-Term differentiation and integration of Fourier Series. Parseval Identity. (10 Lectures)

9. Some Special Integrals: Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral). (**3 Lectures**)

UNIT – V

10. Dirac Delta function and its properties:

Definition of Dirac delta function. Representation as limit of a Gaussian function and rectangular function. Properties of Dirac delta function. (1 Lecture)

11. Theory of Errors: Systematic and Random Errors. Propagation of Errors. Normal Law of Errors. Standard and Probable Error. Least-squares fit. Error on the slope and intercept of a fitted line. (5 Lectures)

12.Introduction to probability:

Independent random variables: Probability distribution functions; binomial, Gaussian, and Poisson, with examples. Mean and variance. Dependent events: Conditional Probability.

Bayes' Theorem and the idea of hypothesis testing. (4 Lectures)

- Mathematical methods for Scientists & Engineers, D.A. McQuarrie, 2003, Viva Books

BSC PHYSICS- CC- 3 LAB- mathematical Physics-1 LAB – Credits:01 Hours: 02/ week - 30 Lectures

The aim of this Lab is not just to teach computer programming and numerical analysis but to emphasize its role in solving problems in Physics.

- Highlights the use of computational methods to solve physical problems
- The course will consist of lectures (both theory and practical) in the Lab
- Evaluation done not on the programming but on the basis of formulating the problem
- Aim at teaching students to construct the computational problem to be solved
- Students can use any one operating system Linux or Microsoft Windows

Topics	Description with Applications
Introduction and Overview	Computer architecture and organization, memory and Input/output devices
Basics of scientific computing	Binary and decimal arithmetic, Floating point numbers, algorithms, Sequence, Selection and Repetition, single and double precision arithmetic, underflow &overflow- emphasize the importance of making equations in terms of dimensionless variables, Iterative methods
Errors and error Analysis	Truncation and round off errors, Absolute and relative errors, Floating point computations.
Review of C & C++ Programming fundamentals	Introduction to Programming, constants, variables and data types, operators and Expressions, I/O statements, scanf and printf, c in and c out, Manipulators for data formatting, Control statements (decision making and looping statements) (If-statement. If-else Statement. Nested if Structure. Else-if Statement. Ternary Operator. Goto Statement. Switch Statement. Unconditional and Conditional Looping. While Loop. Do-While Loop. FOR Loop. Break and Continue Statements. Nested Loops), Arrays (1D & 2D) and strings, user defined functions, Structures and Unions, Idea of classes and objects
Programs:	Sum & average of a list of numbers, largest of a given list of numbers and its location in the list, sorting of numbers in ascending descending order, Binary search
Random number generation	Area of circle, area of square, volume of sphere, value of pi (π)

Solution of Algebraic and Transcendental equations by Bisection, Newton Raphson	Solution of linear and quadratic equation, solving $\alpha = \tan \alpha$; $I = I$ (sin α in optics
Interpolation by Newton Gregory Forward and Backward difference formula, Error estimation of linear interpolation	Evaluation of trigonometric functions e.g. $sin \theta$, $cos \theta$, $tan \theta$, etc .
Numerical differentiation (Forward and Backward difference formula) and Integration (Trapezoidal and Simpson rules), Monte Carlo method	Given Position with equidistant time data to calculate velocity and acceleration and vice versa. Find the area of B-H Hysteresis loop
Solution of Ordinary Differential Equations (ODE) First order Differential equation Euler, modified Euler and Runge-Kutta (RK) second and fourth order methods	First order differential equation • Radioactive decay • Current in RC, LC circuits with DC source • Newton's law of cooling • Classical equations of motion Attempt following problems using RK 4 order method: • Solve the coupled differential equations dx $x^3 dy$ dt = y + x - 3; dx = -x for four initial conditions x(0) = 0, y(0) = -1, -2, -3, -4. Plot x vs y for each of the four initial conditions on the same screen for $0 \le t \le 15$ The differential equation describing the motion of a pendulum is $\frac{d^{2p}}{dt^2} = -sin(\vartheta)$. The pendulum is released from rest at an angular displacement α , i.e. $\vartheta(0) = \alpha$ and $\vartheta^u(0) = 0$. Solve the equation for $\alpha = 0.1, 0.5$ and 1.0 and plot ϑ as a function of time in the range $0 \le t \le 8\pi$. Also plot the analytic solution valid for small $\vartheta(sin(\vartheta)) = \vartheta$

Dr. V.S.Krishna Governemnt Degree College (A), Visakhapatnam BSC PHYSICS MODEL PAPER FOR II SEMESTER

<u>MATHEMATICAL PHYSICS - I – CC-3</u> <u>SECTION-A</u>

I. Answer any <u>FIVE</u> of the following:

5 X 5 = 25 Marks

- 1. Show that every Differentiable function is a Continuous Function
- 2. Obtain the solution of the Differential equation

$$x^{3} y^{\prime\prime\prime}(x) + 5x^{2} y^{\prime\prime}(x) + 2xy^{\prime}(x) - 2y(x) = 0$$

- 3. Prove the Transformation law of Vectors under rotation of Coordinate axes
- 4.Explain the physical significance of the Curl of a Vector
- 5. State and prove Green's theorm of Vector Calculus
- 6. Prove that the curl of the gradient of a scalar field and the Divergence of the

Curl of a Vector field is zero

7. State Fourier's theorm and the Dirichlet conditions to be satisfied by a function

Whose Fourier series expansion is required.

8. Prove that $\Gamma\left(-\frac{3}{2}\right) = \frac{4\sqrt{\pi}}{3}$

9. Let ΔA be the error of a measurement of A, etc. Use error propagation to show that $\left(\frac{\sigma(C)}{C}\right)^2 = \left(\frac{\sigma(A)}{A}\right)^2 + \left(\frac{\sigma(B)}{B}\right)^2$ holds for the product C = AB.

10. If $\langle X \rangle$, $\langle Y \rangle$ are the values of two independent random variables X, Y, what is the expectation value of the product XY ?

SECTION-B

Answer <u>ALL</u> of the following: 5x10=50 Marks

- 11. a) Find the general solution of the differential equation $xy''(x) - y'(x) + x^3y(x) = x^5 + x^3$ 5 M
 - b) By Cauchy's method, obtain the general solution of the differential equation $x^2y''(x) + xy'(x) + 4y(x) = 0$ 5 M

OR

- a) For a lens of Focal length f, the object distance p and the image distance q are related by $\frac{1}{p} + \frac{1}{q} = \frac{1}{f}$. Find the minimum object-image distance (p+q) for fixed f. Assume p & q to be positive. [5 M]
- b) Find the Integrating factor and hence the solution to the differential equation xy''(x) + 2y'(x)-xy(x)=0 [5 M]
- 12. Explain the Curl of a vector field with its physical significance. Derive an

Expression for it in cartesian coordinates.

OR

Derive an expression for Laplacian operator in Spherical polar coordinates

13. Check the gauss theorm of Divergence for the function

 $\overline{V} = r^2 cos\theta \hat{r} + r^2 cos\phi \hat{\theta} - r^2 cos\theta sin\phi \hat{\phi}$ using as your volume one octant

Of the sphere of radius R.

OR

Calculate the Volume integral of the function $f = z^2$ over the Tetrahedron with corners at (0,0,0); (1,0,0);(0,1,0);(0,0,1)

14 Expand the Fourier series of a Square wave function

OR

Prove that $\Gamma(n) = 2 \int_0^\infty x^{2n-1} e^{-x^2} dx$ and hence show that

$$\Gamma(m) \Gamma(n) = 2\Gamma(m+n) \int_0^{\pi/2} (\cos\theta)^{2m-1} (\sin\theta)^{2n-1} d\theta$$

15 a) prove that

$$\delta(f(x)) = \left| \frac{df(x)}{dx} \right|_{x=x_0}^{-1} \delta(x-x_0) \text{ ; where } x_0 \text{ is chosen so that } f(x_0) = 0.$$
[5 M]

b) show that $\delta(x) = \frac{1}{2\pi} \int_{-\infty}^{\infty} e^{-ikx} dk$ using the sequence given by $\delta_n(x) = \frac{n}{\sqrt{\pi}} e^{-n^2 x^2}$ [5 M]

OR

Explain about poisson distribution and Gauss' Normal distribution and also prove that for large n and mean value μ , the poisson distribution approaches a gaussian distribution.
Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM Honors PHYSICS SYLLABUS UNDER CBCS

For Mathematics Combinations

[2022-23 Batch onwards]

I Year B.Sc.-Physics: II Semester

CC-4: ELECTRICITY AND MAGNETISM

Work load:60 hrs per semester

4 hrs/week

- ♦ Get acquainted with the concepts of Electric field & Electric Potential
- Apply the concepts of Electric Field & Electric potential to get expressions for the Capacitance of various types of Capacitors and also to understand about the Electric Polarization in Dielectric materials
- Derive the expressions for the Magnetic fields due to various current distributions using Biot-savart's law and Ampere's Circuital law
- Get acquainted with the basics of Magnetism and the phenomenon of Electro Magnetic Induction
- Work out the analysis required in various AC circuits like LCR by applying Kirchoff's law and also will be able to apply various Network Theorems like Thevenin, Norton for solving problems in DC circuits. Finally, the student will be able to explain about the working of Ballistic Galvanometer.

Learning Objectives:

- 1. To understand Electric Field vector & Electric Potential
- 2. To derive expressions for Electric Capacitance and understand Electric Polarization Vector
- 3. To apply Biot-Savart law and Ampere's law to derive expressions for magnetic fields due to various Current distributions
- 4. To understand Magnetism and the phenomenon of Electro-magnetic Induction
- 5. To apply Kirchhoff's laws to analyze AC circuits.

To apply Thevenin & Norton's Network theorems to analyze DC circuits

To understand the working principle of the Ballistic Galvanometer

Skill Component:

Unit – I & II:

- 1. Learn to apply to exploit the symmetry in Physics problems
- 2. Apply & analyze the properties of conductors in using various Electrical appliances.
- 3. Learn to use efficiently the Dielectric materials (Insulators) in the designing of Electrical gadgets.

Unit – III & IV:

- 1. Measurement of Magnetic field
- 2. Learn to use Bar magnets to design low cost Magnetic or Electromagnetic devices Unit V:
- 1. Design simple and low-cost AC circuits
- 2. Learn to design AC circuits involving LCR combination for simple Electrical Applications
- 3. Apply Network theorems to do Calculations of very complicated Electric circuits.

BSC PHYSICS- CC – 4 ELECTRICITY AND MAGNETISM (Credits: Theory-04, Practicals-01) Theory: 60 Lectures UNIT- I

1.Electric field: Electric field lines. Electric flux. Gauss' Law with applications to chargedistributions with spherical, cylindrical and planar symmetry.(6 Lectures)

2.Electric Potential: Conservative nature of Electrostatic Field. Electrostatic Potential. Laplace's and Poisson equations. The Uniqueness Theorem. Potential and Electric Field of a dipole. Force and Torque on a dipole. (6 Lectures)

UNIT-II

3. Electric Capacitance: Electrostatic energy of system of charges. Electrostatic energy of a charged sphere. Conductors in an electrostatic Field. Surface charge and force on a conductor. Capacitance of a system of charged conductors. Parallel-plate capacitor. Capacitance of an isolated conductor. Method of Images and its application to: (1) Plane Infinite Sheet and (2) Sphere. (10 Lectures)

4. Dielectric Properties of Matter: Electric Field in matter. Polarization, Polarization Charges. Electrical Susceptibility and Dielectric Constant. Capacitor (parallel plate, spherical, cylindrical) filled with dielectric. Displacement vector D. Relations between E, P and D. Gauss' Law in dielectrics, Boundary conditions at a Dielectric surface, Effect of Uniform Electric field on an uncharged Conducting sphere. (8 Lectures)

UNIT- III

5.Magnetic Field: Magnetic force between current elements and definition of Magnetic Field **B**. Biot-Savart's Law and its simple applications: straight wire and circular loop. Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole). Ampere's Circuital Law and its application to (1) Solenoid and (2) Toroid. Properties of **B**: curl and divergence. Vector Potential. Magnetic Force on (1) point charge (2) current carrying wire (3) between current elements. Torque on a current loop in a uniform Magnetic Field. **(8 Lectures)**

UNIT-IV

6.Magnetic Properties of Matter: Magnetization vector (**M**). Magnetic Intensity (**H**). Magnetic Susceptibility and permeability. Relation between **B**, **H**, **M**. Ferromagnetism. B-H curve and hysteresis, Langevin's theory of Diamagnetism & Langevin's theory of Para magnetism, Weiss theory of Ferromagnetism (**6 Lectures**)

7.Electromagnetic Induction: Faraday's Law. Lenz's Law. Self-Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field. Introduction to Maxwell's Equations. Charge Conservation and Displacement current. (5 Lectures)

UNIT -V

8.Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit. (4 Lectures)

9.Network theorems: Ideal Constant-voltage and Constant-current Sources. Network Theorems: Thevenin theorem, Norton theorem, Superposition theorem, Reciprocity theorem, Maximum Power Transfer theorem. Applications to dc circuits. (4 Lectures)

10.Ballistic Galvanometer: Torque on a current Loop. Ballistic Galvanometer: Current and Charge Sensitivity. Electromagnetic damping. Logarithmic damping. CDR. (3 Lectures)

BSC PHYSICS -CC- 4 LAB – Electricity & Magnetism LAB – Credit: 01 Hours: 02/ week - 30 Lectures

List of Experiments:

- Use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current,
 (d) Capacitances, and (e) Checking electrical fuses.
- 2. To study the characteristics of a series RC Circuit.
- 3. To determine an unknown Low Resistance using Potentiometer.
- 4. To determine an unknown Low Resistance using Carey Foster's Bridge.
- 5. To compare capacitances using De'Sauty's bridge.
- 6. Measurement of field strength B and its variation in a solenoid (determine dB/dx)
- 7. To verify the Thevenin and Norton theorems.
- 8. To verify the Superposition, and Maximum power transfer theorems.
- 9. To determine self inductance of a coil by Anderson's bridge.
- 10. To study response curve of a Series LCR circuit and determine its (a) Resonant frequency,(b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.
- 11. To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonant frequency and (b) Quality factor Q.
- 12. Measurement of charge and current sensitivity and CDR of Ballistic Galvanometer
- 13. Determine a high resistance by leakage method using Ballistic Galvanometer.
- 14. To determine self-inductance of a coil by Rayleigh's method.
- 15. To determine the mutual inductance of two coils by Absolute method.

Dr. V.S. Krishna Government Degree College (A) , Visakhapatnam Hons PHYSICS MODEL PAPER FOR I SEMESTER

ELECTRICITY & MAGNETISM – CC-4

SECTION -A

Answer any FIVE of the following :

5x5=25 Marks

- 1. Write down the properties of Electric Lines of Force.
- 2. What do you mean by Electric potential? What is the relation between the Electric potential and Electric Field vector?
- 3. A parallel Plate capacitor of capacitance $100 \ \mu F$ is charged to a potential of 500 V . The plate separation is then reduced to half of its original value. Calculate the new potential on the capacitor and charge.
- 4. Define Electric Susceptibility and obtain the relation between it and the Electric permittivity.
- 5. Explain Biot Savart's law.
- 6. A solenoid of 1000 turns is wound uniformly on a glass tube 50 cm long and 10 cm in diameter. Find the strength of the magnetic field at the center of the solenoid when a current of 0.1 amp flows through it.
- 7. Explain the phenomenon of Hysteresis.
- 8. A closed coil having 50 turns, area $300 \text{ } cm^2$ and resistance 40 ohm is held at right angles to uniform field of 0.02 T. it is then turned through an angle of 30^0 about an axis at right angles to the field. Find the charge induced in the coil.
- 9. The resistance of a lamp is 100 ohm . An alternating potential of 250 V and 50 cycles is applied across the lamp and a 10 μ *F* capacitor in series. Calculate the current through the lamp and Phase lag.
- 10. Derive an expression for the Torque acting on a Current Loop.

SECTION-B

Answer ALL of the following:

5x10=50 Marka

11.State Gauss law and derive an expression for the Electric field due to an uniformly distributed charge on the surface of an infinite cylinder with finite radius.

OR

Derive the expressions for the Electric field and the Electric potential due to an Electric dipole.

12.Define Electric Capacitance and derive an expression for the Electric capacitance due to a Spherical Capacitor.

OR

Write down Poisson and Laplace equations for a Homogeneous Dielectric and Explain in detail the effect of uniform Electric field on an uncharged conducting sphere.

13. Derive an expression for the magnetic field at a point on the axis of circular current carrying loop.

OR

State Ampere's circuital law and derive an expression for the Magnetic field at a point inside a solenoid.

 Explain the Weiss theory of ferromagnetism and derive an expression for Susceptibility.

OR

Derive an expression for the energy stored in a Magnetic field and Obtain Electromagnetic Maxwell's equations both in the Differential and the Integral form.

15. Derive an expression for the current in an A.C. circuit containing Resistance R Inductance L and the capacitance C in series . Obtain the conditions for the Resonance.

OR

State and explain with neat circuit diagrams

- i. Reciprocity Theorem [3 M]
- ii. Superposition Theorem [3 M]
- iii. Maximum Power transfer Theorem [4 M]

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM **BSC PHYSICS SYLLABUS UNDER CBCS**

For Mathematics Combinations SKILL DEVELOPMENT COURSES Revised CBCS w.e.f. 2022-23 Science Stream Syllabus of SOLAR ENERGY

Total 30 hrs (02h/week),

Learning Outcomes:

After successful completion of the course, students will be able to:

- 1. Acquire knowledge on solar radiation principles with respect to solar energy estimation.
- 2. Get familiarized with various collecting techniques of solar energy and its storage
- 3. Learn the solar photovoltaic technology principles and different types of solar cells for energy conversion and different photovoltaic applications.
- 4. Understand the working principles of several solar appliances like Solar cookers, Solar hot water systems, Solar dryers, Solar Distillation, Solar greenhouses

SYLLABUS:

UNIT-I – Solar Radiation:

Sun as a source of energy, Solar radiation, Solar radiation at the Earth's surface, Measurement of Solar radiation-Pyrheliometer, Pyranometer, Sunshine recorder, Prediction of available solar radiation, Solar energy-Importance, Storage of solar energy, Solar pond

UNIT-II – Solar Thermal Systems:

Principle of conversion of solar radiation into heat, Collectors used for solar thermal conversion: Flat plate collectors and Concentrating collectors, Solar Thermal Power Plant, Solar cookers, Solar hot water systems, Solar dryers, Solar Distillation, Solar greenhouses.

UNIT-III – Solar Photovoltaic Systems:

Solar energy into Electricity - Photovoltaic Effect, Solar photovoltaic cell and its working principle, Different types of Solar cells, Series and parallel connections, Photovoltaic applications: Battery chargers, domestic lighting, street lighting and water pumping

Co-curricular Activities (Hands on Exercises): (04 hrs)

[Any four of the following may be taken up]

- 1. Plot sun chart and locate the sun at your location for a given time of the day.
- 2. Analyze shadow effect on incident solar radiation and find out contributors.
- 3. Connect solar panels in series & parallel and measure voltage and current.
- 4. Measure intensity of solar radiation using Pyranometer and radiometers.
- 5. Construct a solar lantern using Solar PV panel (15W)
- 6. Assemble solar cooker
- 7. Designing and constructing photovoltaic system for a domestic house requiring 5kVA power
- 8. Assignments/Model Exam.

(6 hrs)

(**10** hrs)

02 Credits & Max Marks: 50

(10 hrs) Conversion of

Reference Books:

1. Solar Energy Utilization, G. D. Rai, Khanna Publishers

- 1. Solar Energy- Fundamentals, design, modeling & applications, G.N. Tiwari, Narosa Pub., 2005.
- 2. Solar Energy-Principles of thermal energy collection & storage, S.P. Sukhatme, Tata Mc-Graw Hill Publishers, 1999.
- 3. Solar Photovoltaics- Fundamentals, technologies and applications, Chetan Singh Solanki, PHI Learning Pvt. Ltd.,
- 4. Science and Technology of Photovoltaics, P. Jayarama Reddy, BS Publications, 2004.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A) , VISAKHAPATNAM BSC PHYSICS SYLLABUS (w.e.f. 2022-23) SEMESTER- II SDC – II SOLAR ENERGY MODEL QUESTION PAPER

Max. Marks: 50

Time: 1¹/₂ hrs (90 Minutes)

SECTION- A

(4x5M=20 Marks)

Answer any four questions. Each answer carries 5 marks (At least 1 question should be given from each Unit)

- 1. Explain about the Extraterrestrial Solar radiation.
- 2. Explain the principle of Sunshine recorder.
- 3. Explain the principle of conversion of Solar energy into heat.
- 4. Distinguish between Flat plate and Concentrating Solar collectors.
- 5. Explain about Solar green houses.
- 6. Explain Photovoltaic effect.
- 7. Write different types of Solar cells.
- 8. Write any five applications of Solar cells.

SECTION B (3x10M = 30 Marks)

Answer any three questions. Each answer carries 10 marks (At least 1 question should be given from each Unit)

9. Explain the construction and working of Pyrheliometer.

10. Explain the construction and working of Paraboloidal mirror solar collector.

11. Explain the construction and working of a Solar thermal power plant.

12. Explain the construction and working of a P-N junction solar cell.

13. Explain in detail about the input and output characteristics of a Solar cell.

Dr. V.S.KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS

[2022-23 Batch onwards]

I Year Minor Physics - I: Semester-II

FUNDAMENTALS OF MECHANICS & LIGHT

Work load:60 hrs per semester

4 hrs/week

Course outcomes:

On successful completion of this course, the students will be able to:

- **CO 1 :** Learn to use the formalism of Vector Algebra & Vector Analysis in the application of Newton's laws and in the analysis of Rigid body motion
- **CO 2 :** To get acquainted with the basic aspects of the oscillations & waves and also about the *Elementary aspects of the Ultrasonics*
- **CO3**: To get thorough with the fundamentals of Geometrical Optics & Interference of the light
- **CO 4 :** To understand the basic practical aspects of the phenomena of the Diffraction & Polarization

CO 5: To know about the basic and application aspects of the LASERS and Optical Fibers

UNIT - I

1. Mathematical Physics & Particle dynamics:

Scalar and vector products, polar and axial vectors, triple and quadruple products,

Scalar and vector fields, differentiation of a vector, gradient, divergence, curl and O operations and their meaning, idea of line, surface and volume integrals, Gauss and Stokes' theorem.

Newton's laws of motion, conservation of linear momentum, center of mass, conservative forces,

work energy theorem, particle collisions (one Dimension) (8 Lectures)

2. Rotational kinematics and dynamics:

Rotational motion, forces and pseudo forces, torque and angular momentum, kinetic energy of

rotation, rigid body rotation dynamics, moment of inertia, conservation of angular momentum,

comparison of linear and angular momentum, motion of a symmetric top. (6 Lectures)

UNIT – II

3. Oscillations & waves :

Linearity and superposition principle, free oscillation with one and two degrees of freedom, simple pendulum, combination of two simple harmonic motions. Lissajous figures, free and damped vibrations, forced vibrations and resonance, Q factor; wave equation, travelling and standing waves, superposition of waves, phase and group velocity. **(8 Lectures)**

4. Ultrasonics :

Characteristics of Ultrasonic waves , Production of Ultrasonic waves – Piezo Electric method and Magnetostriction method , Applications of Ultrasonics. (4 Lectures)

UNIT – III

- **5.** Geometric Optics : Elementary aspects of Mirrors , Lenses & Prisms , Magnification & Resolution , Construction & working of simple , compound & Confocal Microscopes (6 Lectures)
 - 6. Interference : Interference, division of amplitudes, Young's double split, Fresnel's biprism, interference in thin films and wedged shaped films (5 Lectures)

UNIT – IV

7. Diffraction :

Diffraction at a single slit and a circular aperture, diffraction due to a double slit , plane transmission grating, resolving power of a telescope and a microscope, resolving and dispersive power of a plane diffraction grating. (6 Lectures)

8. Polarization :

Polarization: Polarization by reflection and refraction, Brewster's law, double refraction, nicol prism, quarter and half-wave plates, Production and analysis of circularly and elliptically polarized light, Optical rotation, Specific rotatory power, Laurent's Half shade Polarimeter (**6 Lectures**)

UNIT – V

- 9. LASERS : Properties of LASERs , Spontaneous & Stimulated Emissions of Photons , Absorption of Photons , Metastable states , Conditions for achieving a sustained LASER , Ruby LASER , Helium Neon LASER , CO₂ LASER, Applications of LASERs (6 Lectures)
- 10. Optical Fibers : Total Internal Reflection , Components of an Optical Fiber , Propagation of an EM wave through an Optical Fiber , Single & Multimode Fibers , Step index & Graded index Fibers , Applications of Optical Fibers
 (5Lectures)

Recommended Text books/references:

- 1. Spiegel, M. R. Vector Analysis Schaum Outline Series. McGraw-Hill (1974)
- 2. Beiser, A. Concepts of Modern Physics McGraw-Hill (2002).

- 5. Ajay K. Ghatak Optics , Tata McGraw hill publishers
- 6. K.A. Hecht, Fundamentals of optics, Addison Wesley publishers

Minor Physics – I Practicals Credit:01 – Hours – 02/week – 30 Hrs

(Recommended that physics practical to be carried out from mechanics and optics as per availability of facilities with minimum 3 experiments from each group)

Group-A: Mechanics

- 1. Determination of spring constant of a spring by (i) static, and (ii) dynamic methods.
- 2. Study of damped harmonic oscillator- Q factor.
- 3. Determination of temperature coefficient of resistance using platinum resistance thermometer.
- 4. Study of thermal couple calibration and inversion temperature.
- 5. LCR study of resonance Q-factor.
- 6. Kator's pendulum- Bar pendulum.

Group-B: Optics

7. Determination of wavelength of light by Fresnel's biprism.

8. Determination of wavelength of sodium light by Newton's arrangement.

9. Determination of refractive index of tint glass using a spectrometer.

10. Determination of dispersive power of a glass prism using Cauchy's constant. Also determine the resolving power of a prism.

11. Determination of wavelength of sodium light using a plane transmission grating and resolving power of a diffraction grating.

12. Determination of specific rotation of cane sugar solution using a polarimeter.

Mov Mark :75

TIME OI

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam Minor Physics-I – Semester-II MODEL PAPER

Time : 3 Hrs

Answer ALL of the following:

SECTION-A

Max.Marks:75

5x10=50 Marks

1. State the law of Conservation of Linear Momentum and derive the expressions for the Final Velocities of two particles undergoing Elastic collision in terms of their initial Velocities .

OR

Derive the expressions for the Angular Momentum and Kinetic Energy of a Rigid body undergoing pure Rotation. Also Derive the expressions for all the elements of the Moment of Inertia Tensor for a Rigid body.

2. Derive the Wave Equation for a Harmonic Wave and explain about its general Solution and the physical significance of the solution.

OR

Explain the production of Ultrasonics by using piezo- electric method with a neat diagram.

3. Explain the construction and the working of Fresnel's Biprism with a neat Diagram.

OR

Explain the Interference phenomenon due to reflected light from a transparent Thin film with neat diagrams and obtain the conditions for Constructive and Destructive Interferences .

4. Explain the formation of Fraunhofer Diffraction pattern due to a Diffraction Grating and obtain the equations for the positions of maximum and minimum intensities with neat diagrams .

OR

Explain the Construction and the working of Nicol's prism with neat diagrams.

5. Explain the construction and working of a CO_2 LASER with neat diagrams.

OR

Explain about the Classification of Optical Fibers based on Refractive index profile and the Mode of propagation of Light in them .

SECTION -B

Answer any <u>FIVE</u> of the following

5x5=25 Marks

- 2. Show and prove the law of conservation of Linear Momentum for a system of Particles.
- 3. Find the Tension in the Thread tied to a metal ball and suspended from the Top of Car accelerating on a straight road with an acceleration 4.9 ms^{-2} . Also find the angle made by the Thread with the vertical. Take $g = 9.8 \text{ ms}^{-2}$.
- 4. Two parts of a sonometer wire, divided by a knife edge, differ in length by 2 mm and produce two Beats per second when sounded together. If the total length of the wire is 1 meter, find the frequencies of the two parts of the wire.
- **4.** Write any five characteristics of ultrasonics.
- **5.** Explain the terms Magnification and Resolution.
- 6. A parallel beam of light with wavelength 5890 A^0 is incident on a thin Glass Plate such that the angle of incidence on the plate is 60^0 . Calculate the smallest thickness of the plate which will make it appear dark by reflection. The Refractive index of the material of the plate is 1.5.
- 7. In a Fraunhofer Diffraction pattern of a single slit of width 0.3 mm, find the directions along which the first dark band (minima) and the next bright band (maxima) are formed if the incident light has a wavelength of 589 nm.
- 8. Derive expressions for the thicknesses of Quarter and half wave plates.
- 9. Write any five applications of LASERS.
- **10.**Explain the phenomenon of Total Internal Reflection and also explain how this phenomenon is used in Optical Fibers with neat diagrams

Dr. V.S. Krishna Government Degree College (A) , Visakhapatnam Honors PHYSICS SYLLABUS UNDER CBCS

For Mathematics Combinations

[2022-23 Batch onwards]

II Year B.Sc.-Physics: III Semester

CC-5: MATHEMATICALPHYSICS

Work load:60 hrs per semester

4 hrs/week

Course outcomes:

On successful completion of this course, the student will be able to:

- Comprehend the Frobenius method of obtaining series solutions of ordinary Second order Differential equations and apply to it to get the series solutions of Hermite's, Legendre's, Bessel's & Laguerre's differential equations
- Get acquainted with the elementary methods of obtaining solutions to Partial Differential equations
- Understand various ideas & theorems of Complex variables and apply them to solve many integrals one encounters in physics problems
- To derive the fundamental theorems of Fourier transforms and apply them to solve some partial differential equations one comes across in physics
- To know the basic aspects of Laplace transforms and their properties and hence will be able to work out some second order Ordinary Differential equations in Physics problems

Learning Objectives:

- To understand and apply Frobenius method to get series solutions of Hermite, Legendre, Bessel & Laguerre Differential equations
- 2. To understand the elementary methods of solving Partial Differential Equations
- 3. To understand the basic theorems of Complex Analysis and work out the problems involving Complex variables
- 4. To work out with the theorems of Fourier Integral Transforms and apply to solve Partial Differential Equations
- 5. To work out with the basic theorems of Laplace transforms and apply to solve Ordinary Differential Equations

Skill Component: Unit- I & II:

1. Calculation of sums of infinite series and analysis of them

2. Working out the Partial Differential equations with symmetrical aspects **Unit – III:**

- 1. Working out with complex numbers useful in analyzing AC electrical circuits.
- 2. Learn to work with the Analyticity of functions Unit IV & V:
- **1.** Apply & Analyze Fourier and Laplace Transforms in analyzing and designing simple Electrical and Electronic circuits.

PHYSICS-CC-5: MATHEMATICAL PHYSICS-II (Credits: Theory-04, Practicals-01) Theory: 60 Lectures / Practical: 30 sessions UNIT – I

 Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre, Bessel, Hermite and Laguerre Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Generating Function, Orthogonality. Simple recurrence relations. Expansion of function in a series of Legendre Polynomials. Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zeros of Bessel Functions (Jo(x) and J1(x)) and Orthogonality.

UNIT-II

2. Partial Differential Equations: Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a stretched string, rectangular and circular membranes. Diffusion Equation. (10 Lectures)

UNIT-III

3. Complex Analysis: Brief Revision of Complex Numbers and their Graphical Representation. Euler's formula, De Moivre's theorem, Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles and branch points, order of singularity, branch cuts. Integration of a function of a complex variable. Cauchy's Inequality. Cauchy's Integral formula. Simply and multiply connected region. Laurent and Taylor's expansion. Residues and Residue Theorem. Application in solving Definite Integrals. (15 Lectures)

UNIT- IV

- 4. Integrals Transforms: Fourier Transforms: Fourier Integral theorem. Fourier Transform. Examples. Fourier transform of trigonometric, Gaussian, finite wave train & other functions. Representation of Dirac delta function as a Fourier Integral. Fourier transform of derivatives, Inverse Fourier transform, Convolution theorem. Properties of Fourier transforms (translation, change of scale, complex conjugation, etc.). Three dimensional Fourier transforms with examples. Application of Fourier Transforms to differential equations: One dimensional Wave and Diffusion/Heat Flow Equations. (10 Lectures)
 - UNIT- V
- 5. Laplace Transforms: Laplace Transform (LT) of Elementary functions. Properties of LTs: Change of Scale Theorem, Shifting Theorem. LTs of 1st and 2nd order Derivatives and Integrals of Functions, Derivatives and Integrals of LTs. LT of Unit Step function, Dirac Delta function, Periodic Functions. Convolution Theorem. Inverse LT. Application of Laplace Transforms to 2nd order Differential Equations: Damped Harmonic Oscillator, Simple Electrical Circuits, Coupled differential equations of 1st order. Solution of heat flow along infinite bar using Laplace transform. (10 Lectures)

BSC PHYSICS -CC-5 LAB – Mathematical Physics-2 LAB – Credit:01 Hours: 02/ week - 30 Lectures

The aim of this Lab is to use the computational methods to solve physical problems. Course will consist of lectures (both theory and practical) in the Lab. Evaluation done not on the programming but on the basis of formulating the problem

Topics	Description with Applications
Introduction to Numerical computation software Scilab	Introduction to Scilab, Advantages and disadvantages, Scilab environment, Command window, Figure window, Edit window, Variables and arrays, Initializing variables in Scilab, Multidimensional arrays, Subarray, Special values, Displaying output data, data file, Scalar and array operations, Hierarchy of operations, Built in Scilab functions, Introduction to plotting, 2D and 3D plotting (2), Branching Statements and program design, Relational & logical operators, the while loop, for loop, details of loop operations, break & continue statements, nested loops, logical arrays and vectorization (2) User defined functions, Introduction to Scilab functions, Variable passing in Scilab, optional arguments, preserving data between calls to a function, Complex and Character data, string function, Multidimensional arrays (2) an introduction to Scilab file processing, file opening and closing, Binary I/o functions, comparing binary and formatted functions, Numerical methods and developing the skills of writing a program (2). Ohms law to calculate R, Hooke's law to calculate spring Constant Solution of mesh equations of electric circuits (3 meshes) Solution of coupled spring mass systems (3 masses)
Generation of Special functions using User defined functions in Scilab	Generating and plotting Legendre Polynomials Generating and plotting Bessel function
Solution of ODE First order Differential equation Euler, modified Euler and Runge-Kutta second order methods Second order differential equation Fixed difference method Partial differential equations	 First order differential equation Radioactive decay Current in RC, LC circuits with DC source Newton's law of cooling Classical equations of motion Second order Differential Equation Harmonic oscillator (no friction) Damped Harmonic oscillator Over damped Critical damped Oscillatory Forced Harmonic oscillator Transient and Steady state solution

	Apply above to LCR circuits also Solve $x2 d2y - 4x (1 + x) dy + 2(1 + x) = x3$ ds2 ds with the boundary conditions at x = 1, y = 1 e2, dy = -3 e2 -0.5 , 2 ds 2 in the range $1 \le x \le 3$. Plot y and dy against x in the ds given range on the same graph. Partial Differential Equation: • Wave equation • Heat equation • Poisson equation • Laplace equation
Using Scicos / xcos	 Generating square wave, sine wave, saw tooth wave Solution to harmonic oscillator Study of beat phenomenon Phase space plots

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM III SEMESTER II B.SC. PHYSICS – CC-5 TITLE: MATHEMATICAL PHYSICS (MODEL PAPER)

DURATION: 3 hrs

SECTION-A

MAX. MARKS: 75

Answer ALL the questions Of the following

(5 X 10 = 50 M)

1. Write the Bessel Differential equation and obtain the series solution of it if the parameter in it is a half integer.

[OR]

Write Laguerre Differential equation and obtain the two Linear independent series solutions of it.

2. Solve the Laplace equation and find the Temperature distribution for a finite rectangular plate of length 10 cm and breadth 30 cm with two thermally insulated sides, third side at 0^0 and the fourth side at a given temperature distribution f(x) = x.

[OR]

Find the steady state temperature distribution in a spherical shell of inner radius 1 and outer radius 2 if the inner surface is held at 0^0 and the outer surface has its upper half at 100^0 and its lower half at 0^0 .

3. Evaluate the Fresnel integrals in optics using Complex variable analysis in the case of infinite upper limits. $\int_0^a \sin x^2 dx$ and $\int_0^a \cos x^2 dx$ are the Fresnel integrals.

[OR]

Evaluate by contour Integration the integral $\int_0^\infty \frac{\cos^2(\frac{\pi x}{2})}{(1-x^2)^2} dx$ by choosing an appropriate contour.

4. Find the Fourier transform of the function $f(x) = e^{-\alpha |x|} e^{i\beta x}$ and from it evaluate the integrals $\int_{-\infty}^{+\infty} \frac{\cos kx}{\alpha^2 + (\beta - k)^2} dk$ and $\int_{-\infty}^{+\infty} \frac{\sin kx}{\alpha^2 + (\beta - k)^2} dk$.

[OR]

Consider the Rectangular function defined as rect $\left(\frac{x}{a}\right) = \begin{cases} 1 & when |x| < \frac{a}{2} \\ 0 & when |x| > \frac{a}{2} \end{cases}$

Verify the convolution theorems of the Fourier and its Inverse transforms for the above function.

5. Find the Fourier transforms of the functions $\cos [\pi x^2]$ and $\sin [\pi x^2]$. [OR]

Verify Convolution theorems of Fourier and its inverse transforms for the functions $f(t) = e^{-t^2/a^2}$ and $g(t) = e^{-t^2/b^2}$.

SECTION-B Answer any FIVE questions of the following

(5 X 5 = 25 M)

- 6. Prove the Recurrence relation $xP'_{l}(x) P'_{l-1}(x) = lP_{l}(x)$
- 7. Prove that $\lim_{x \to 0} x^{-3/2} J_{3/2}(x) = \frac{\sqrt{2/\pi}}{3}$

8. Use Generating function to show that P_{2n+1}(0) = 0 and P_{2n}(0) = (-1)ⁿ (2n-1)!/(2ⁿ n!) When n >1 and P₂(0) = -1/2.
9. Evaluate ⁵√-32.

- 10. Find out whether the following functions are analytic a) $\frac{x-iy}{x^2+y^2}$ b) $\frac{y-ix}{x^2+y^2}$.
- 11. Find the residues of the function $\frac{z-2}{z^2(1-2z)^2}$ at z = 0 and at $z = \frac{1}{2}$.
- 12. Find the Fourier transform of the $te^{-\frac{t^2}{a^2}}$.
- 13. Explain about the Fourier sine and Fourier cosine transforms.
- 14. Prove the Parseval's theorem of Fourier transforms.
- 15. Prove a) Linearity theorem and b) The shifting of origin theorem of Fourier transforms

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam BSC PHYSICS SYLLABUS UNDER CBCS

II Year B.Sc.-Physics: III Semester

[2022-23 Batch onwards]

CC-6: ELEMENTS OF MODERN PHYSICS

Work load:60 hrs per semester

4 hrs/week

On successful completion of this course, the student will be able to:

- To get the exposure in terms of theoretical as well as experimental aspects both in Quantum theory of radiation & the existence of Matter waves
- To understand and also will be able apply Heisenberg's Uncertainty principle and the Schrodinger's formalism of the Quantum Mechanics
- To apply the Time Independent Schrodinger equation to some basic problems in quantum mechanics and also to get aware of the basic ideas about Quantum Tunneling
- To get acquainted with the elementary aspects of properties of Atomic Nuclei and also of Nuclear Models and the phenomenon of Radio Activity
- To know about the various applications of Nuclear Physics like Nuclear reactors in detail and the student will also be able to understand the basic aspects of LASER systems

Learning Objectives:

- 1. To understand the Quantum Theory of Radiation and the Matter Waves
- 2. To understand Heisenberg Uncertainty principle and Schrodinger formalism of Quantum Mechanics
- 3. To apply Time Independent Schrodinger Equation to some problems in Quantum Mechanics and also about Quantum Tunneling
- 4. To comprehend the basic properties of Nuclei and understand nuclear models and the phenomenon of Radioactivity
- 5. To get acquainted with the applications of Nuclear Physics and understand the basic aspects of LASER systems

Skill Component:

Unit – I & II :

- 1. To work out rough & quick calculations regarding Atomic & Nuclear phenomena using Heisenberg Uncertainty principle
- 2. Apply & analyze some thought experiments to design real physics experiments
- 3. Develop the skills in constructing wave packets using computations.

Unit – III:

- 1. Apply & analyze the functioning of Quantum dots in the designing of Advanced instruments and solid state Technology
- 2. Analyze the applications of Tunneling phenomenon in Electronic devices

Unit – IV :

- 1. Develop the computational skills to do modelling & curve fitting
- **2.** Apply & analyze the phenomenon of Radioactivity in Real life applications (medicine -cancer treatment)

Unit – V :

- 1. Apply & analyze the phenomena of Nuclear Fission & Fusion to generate Electricity
- 2. Develop the art of designing simple equipment with the He-Ne LASER

BSC PHYSICS-CC - 6: ELEMENTS OF MODERN PHYSICS (Credits: Theory-04, Practicals-01) Theory: 60 Lectures Practical: 30hrs

UNIT-I

1.Quantum Theory of Light & Matter Waves: Planck's quantum, Planck's constant and light as a collection of photons; Blackbody Radiation: Quantum theory of Light; Photo-electric effect and Compton scattering. De Broglie wavelength and matter waves; Davisson-Germer experiment. Wave description of particles by wave packets. Group and Phase velocities and relation between them. Two-Slit experiment with electrons. Probability. Wave amplitude and wave functions. (**14 lectures**)

UNIT-II

2.Uncertainity Principle: Position measurement- gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle (Uncertainty relations involving Canonical pair of variables): Derivation from Wave Packets impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle- application to virtual particles and range of an interaction. (**5 Lectures**)

3.Quantum Mechanics: Two slit interference experiment with photons, atoms and particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of a wave function, probabilities and normalization; Probability and probability current densities in one dimension. (10 Lectures)

UNIT-III

4. Quantum Mechanical problems in One Dimension: One dimensional infinitely rigid boxenergy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunnelling in one dimension- across a step potential & rectangular potential barrier. (10 Lectures)

UNIT-IV

5.Properties of Nuclei & Nuclear Models: Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, Liquid Drop model: semi-empirical mass formula and binding energy, Nuclear Shell Model and magic numbers. **(6 Lectures)**

6.Radioactivity: stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.
 (8 Lectures)

UNIT- V

7.Nuclear Physics Applications: Fission and fusion- mass deficit, relativity and generation of energy; Fission - nature of fragments and emission of neutrons. Nuclear reactor: slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions driving stellar energy (brief qualitative discussions).
 (3 Lectures)

8.Lasers: Einstein's A and B coefficients. Metastable states. Spontaneous and Stimulated emissions. Optical Pumping and Population Inversion. Three-Level and Four-Level Lasers. Ruby Laser and He-Ne Laser. Basic lasing. (4 Lectures)

BSC PHYSICS PRACTICAL -CC-6 LAB – Modern Physics LAB –

Credit:01 - Hours: 02/ week / 30 Lectures

List of experiments:

- 1. Measurement of Planck's constant using black body radiation and photo-detector
- 2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
- 3. To determine work function of material of filament of directly heated vacuum diode.
- 4. To determine the Planck's constant using LEDs of at least 4 different colours.
- To determine the wavelength of H-alpha emission line of Hydrogen atom.
 To determine the ionization potential of mercury.
- 6. To determine the absorption lines in the rotational spectrum of Iodine vapour.
- 7. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
- 8. To setup the Millikan oil drop apparatus and determine the charge of an electron.
- 9. To show the tunneling effect in tunnel diode using I-V characteristics.
- 10. To determine the wavelength of laser source using diffraction of single slit.
- 11. To determine the wavelength of laser source using diffraction of double slits.
- 12. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam B.SC. PHYSICS MODEL PAPER FOR III SEMESTER

MODERN PHYSICS – CC-6

Time: 3 Hrs

Max. Marks: 75

SECTION – A Answer all Questions of the following [5 X 10 = 50]

1. Explain the Planck's Quantum theory of Blackbody Radiation and derive an expression for Monochromatic Energy density of Blackbody Radiation.

[OR]

Explain the experimental arrangement of the Davisson- Germer experiment and also explain how the existence of matter waves was confirmed by this experiment.

- 2. Explain the arrangement and the working of the Gamma ray microscope thought experiment. [OR]
- Derive Time dependent and Time independent Non-relativistic Schrodinger's equations in Quantum mechanics.
- 3. Derive expressions for Eigen energy values and the corresponding Eigen functions for a particle moving in a one-dimensional infinite potential well.

[OR]

- Derive the expressions for Reflection and Transmission probabilities for an incident plane matter wave due to a one-dimensional finite potential step.
- 4. Explain the Liquid drop model of Atomic nuclei.

[OR]

Explain the shell model of Atomic nuclei and also explain the high stability of nuclei

associated with the magic numbers.

5. Explain the Gamow's theory of Alpha decay in Atomic nuclei. [OR]

Explain the construction and the working of a He-Ne LASER.

SECTION – B Answer any FIVE Questions of the following [5 x 5 = 25]

- 6. Explain the deBroglie hypothesis of Matter waves and derive an expression for wavelength of Matter waves.
- 7. Distinguish between Phase and Group velocities.

- 8. Estimate the width of an excited energy state of an atom if the lifetime of the atom in the state is 1 ns.
- 9. Explain the physical significance of Wavefunction and also explain the conditions on it.

10. Calculate the third excited energy eigen value for a particle of a proton moving in an infinite one-dimensional potential well of width 3 fm.

- 11. Explain briefly about the Quantum mechanical Tunneling.
- 12. Calculate the potential energy due to the electric repulsion between two nuclei of ${}_{6}^{12}C$ when they touch each other at the surface.
- 13. Calculate the decay constant, the average life and the activity of 1 mg of $^{198}_{79}Au$ if the half life time of the Gold nuclei is 2.7 days.
- 14. Write the characteristics of Nuclear forces.
- 15. Explain about i) Meta stable states ii) Population Inversion.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS [2022-23 Batch onwards]

II Year B.Sc.-Physics: IV Semester

CC-7: THERMAL PHYSICS

Work load:60 hrs per semester

4 hrs/week

On successful completion of this course, the student will be able to:

- ✤ To understand the First law of Thermodynamics and apply them to analyze various Thermodynamic processes
- ✤ To comprehend the importance of the Second law of Thermodynamics and its various applications
- To get a thorough knowledge of the concept of Entropy and get acquainted with the Maxwell's Thermodynamic Potentials
- To get enough exposure to work out with the maxwell's Thermodynamic relations & Kinetic theory of gasses to apply the theory to understand the basic aspects of molecular collisions
- * To get a thorough understanding about the behaviour of Real gasses

Learning Objectives:

- 1. To understand the First law of Thermodynamics and apply to various Thermodynamic processes
- 2. To understand the Second law of Thermodynamics and its various applications
- 3. To understand the Concept of Entropy and get acquainted with Maxwell's Thermodynamic potentials
- 4. To work out to derive Maxwell's Thermodynamic relations and understand Maxwell's Kinetic Theory of Gasses and apply it to Molecular Collisions
- 5. To understand the behaviour of Real Gasses

Skill Component:

Unit – I:

- 1. Enhance the skills in measuring Temperature and Heat energy
- 2. Determination of the Specific Heats of various substances
- 3. Energy calculations in various Thermodynamic phenomena of every day life

Unit – II:

- Apply & analyze the design of various Heat engines in the nearby surroundings (Automobiles, Refrigerators, ACs etc)
- 2. Calculations of efficiencies of various Thermodynamic cycles in daily life

Unit – III:

- 1. Entropy calculations for real life Thermodynamic phenomena
- 2. Apply & analyze Thermodynamic phenomena like Adiabatic demagnetization to attain low Temperatures

Unit – IV & V:

- 1. Measurement of specific Heats of gasses and Thermal conductivity of solid Heat conductors
- 2. Analyze the Measurements of critical constants for Real Gasses

PHYSICS-CC - 7: THERMAL PHYSICS (Credits: Theory-04, Practicals-01) Theory: 60 Lectures – Practical: 30 Hrs

(Include related problems for each topic) UNIT- I

1.Zeroth and First Law of Thermodynamics: Extensive and intensive Thermodynamic Variables, Thermodynamic Equilibrium, Zeroth Law of Thermodynamics & Concept of Temperature, Concept of Work & Heat, State Functions, First Law of Thermodynamics and its differential form, Internal Energy, First Law & various processes, Applications of First Law: General Relation between CP and CV, Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Co-efficient.

(10 Lectures)

UNIT-II

2.Second Law of Thermodynamics: Reversible and Irreversible process with examples. Conversion of Work into Heat and Heat into Work. Heat Engines. Carnot's Cycle, Carnot engine & efficiency. Refrigerator & coefficient of performance, 2nd Law of Thermodynamics: Kelvin- Planck and Clausius Statements and their Equivalence. Carnot's Theorem. Applications of Second Law of Thermodynamics: Thermodynamic Scale of Temperature and its Equivalence to Perfect Gas Scale. (10 Lectures)

UNIT-III

3.Entropy: Concept of Entropy, Clausius Theorem. Clausius Inequality, Second Law of Thermodynamics in terms of Entropy. Entropy of a perfect gas. Principle of Increase of Entropy. Entropy Changes in Reversible and Irreversible processes with examples. Entropy of the Universe. Entropy Changes in Reversible and Irreversible Processes. Principle of Increase of Entropy. Temperature–Entropy diagrams for Carnot's Cycle. Third Law of Thermodynamics. Unattainability of Absolute Zero. (7 Lectures)

4.Thermodynamic Potentials: Thermodynamic Potentials: Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy. Their Definitions, Properties and Applications. Surface Films and Variation of Surface Tension with Temperature. Magnetic Work, Cooling due to adiabatic demagnetization, First and second order Phase Transitions with examples, Clausius Clapeyron Equation and Ehrenfest equations. (7 Lectures)

UNIT- IV

5.Maxwell's Thermodynamic Relations: Derivations and applications of Maxwell's Relations, Maxwell's Relations:(1) Clausius Clapeyron equation, (2) Values of C_p - C_v ,

(2) T dS Equations, (4) Joule-Kelvin coefficient for Ideal and Van der Waal Gases, (5) Energy equations, (6) Change of Temperature during Adiabatic Process.(6 Lectures)

6.Maxwell Distribution of Velocities: Maxwell-Boltzmann Law of Distribution of Velocities in an Ideal Gas and its Experimental Verification. Doppler Broadening of Spectral Lines and Stern's Experiment. Mean, RMS and Most Probable Speeds. Degrees of Freedom. Law of Equipartition of Energy (No proof required). Specific heats of Gases.

7.Molecular Collisions: Mean Free Path. Collision Probability. Estimates of Mean Free Path.
 Transport Phenomenon in Ideal Gases: (1) Viscosity, (2) Thermal Conductivity and (3) Diffusion.
 Brownian Motion and its Significance. (4 Lectures)

UNIT- V

8.Real Gases: Behavior of Real Gases: Deviations from the Ideal Gas Equation. The Virial Equation. Andrew's Experiments on CO₂ Gas. Critical Constants. Continuity of Liquid and Gaseous State. Vapour and Gas. Boyle Temperature. Van der Waal's Equation of State for Real Gases. Values of Critical Constants. Law of Corresponding States. Comparison with Experimental Curves. P-V Diagrams. Joule's Experiment. Free Adiabatic Expansion of a Perfect Gas. Joule-Thomson Porous Plug Experiment. Joule-Thomson Effect for Real and Van der Waal Gases. Temperature of Inversion. Joule-Thomson Cooling. (10 Lectures)

List of Experiments:

- 1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.
- 2. To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.
- 3. To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.
- 4. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method.
- 5. To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT).
- 6. To study the variation of Thermo-Emf of a Thermocouple with Difference of Temperature of its Two Junctions.
- 7. To calibrate a thermocouple to measure temperature in a specified Range using
 - (1) Null Method, (2) Direct measurement using Op-Amp difference amplifier and to determine Neutral Temperature.

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam B.SC. PHYSICS MODEL PAPER FOR III SEMESTER

THERMAL PHYSICS – CC-7

Time: 3 Hrs

Max. Marks: 75

SECTION – A

Answer all Questions of the following $[5 \times 10 = 50]$

1. Derive expressions for work done during Adiabatic and Isothermal processes.

[OR]

Explain the first law of Thermodynamics and its applications.

2. Explain the working of Carnot's engine and derive an expression for its efficiency.

[OR]

Explain about the Thermodynamic scale of temperature and also about its equivalence to perfect gas scale.

3. Explain about the four Thermodynamic potentials.

[OR]

Explain about the Entropy changes in Reversible and Irreversible processes.

4. Derive an expression for the coefficient of viscosity of a gas using kinetic theory of gasses.

[OR]

Derive an expression for Maxwell's law of distribution of molecular speeds of an ideal gas.

5. Explain about the Andrew's experiments on CO_2 gas.

State and explain Joule-Kelvin effect. Derive an expression for Joule-Kelvin coefficient.

SECTION – B

Answer any FIVE Questions of the following $[5 \times 5 = 25 \text{ M}]$

- 6. Explain the Zeroth law of Thermodynamics.
- 7. Calculate the efficiency of a reversible Carnot's engine working between $72^{\circ}C \& 187^{\circ}C$.
- 8. Explain about the entropy of the Universe.
- 9. Derive the first T ds equation.
- 10. Write a short note on Transport phenomenon in gasses.
- 11. Explain about mean free path in a gas.
- 12. Write a short note on Temperature of inversion.
- 13. Explain about the virial equation of state for a real gas.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM PHYSICS SYLLABUS UNDER CBCS

[2022-23 Batch onwards]

II Year BSC Physics: IV Semester

CC-8: QUANTUM MECHANICS AND APPLICATIONS

Work load:60 hrs per semester

4 hrs/week

On successful completion of this course, the student will be able to:

- a. To get acquainted with and understand the basic aspects of Time Dependent Schrodinger equation Time Independent Schrodinger equation and the physical significance of the wave function
- b. To get the knowledge to work out with the Time Independent Schrodinger Equation to solve some basic One - dimensional problems in quantum Mechanics
- c. To comprehend the analysis of the mathematical as well as the physical aspects of the Wavefunctions of electron in Hydrogen Atom
- *d.* To understand the details of the theoretical as well as the experimental aspects of Stark & Zeeman effects
- *e.* To learn how to extend the formalisms of vector Atom model & Schrodinger to many electron atoms

Learning Objectives:

- 1. To understand the basic aspects of Time Dependent Schrodinger Equation, Time Independent Schrodinger Equation and the physical significance of wave function
- 2. To solve Time Independent Schrodinger Equation for some one dimensional Potential functions in the Quantum Mechanics
- 3. To comprehend the wavefunctions of the electron in Hydrogen atom
- 4. To understand the stark & the Zeeman effects
- 5. To extend the vector Atom model and the formalism of Schrodinger to Many Electron atoms

Skill Component:

Unit – I:

- 1. Analyze the applications of Time Dependent & Independent Schrodinger Equations to Quantum devices (Quantum wire, Quantum wells etc)
- 2. Simple & Quick calculations for quantum phenomena using Uncertainty principle

Unit – II & III:

- 1. Calculations of allowed discrete energy levels for simple potential functions using a computer
- 2. Apply & analyze the Quantum mechanical concepts of electrons in atoms to exploit their chemical properties in real life applications

Unit – IV & V :

- 5. Analyze the properties of elements in the Periodic Table using Atomic orbital wave functions
- 6. Learn to design some methods to vary Atomic energy levels using phenomena like Zeeman & Stark effects.
- 7. Hartree calculations of Atomic orbital wavefunctions in many electron Atoms.

PHYSICS-CC- 8: QUANTUM MECHANICS AND APPLICATIONS (Credits: Theory-04, Practical-01) Theory: 60 Lectures Work load:60 hrs per semester

4 hrs/week

UNIT-I

1.Time dependent Schrodinger equation: Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigenvalues and Eigenfunctions. Position, momentum and Energy operators; commutator of position and momentum operators; Expectation values of position and momentum. Wave Function of a Free Particle. (6 Lectures)

2.Time independent Schrodinger equation-Hamiltonian, stationary states and energy eigenvalues; expansion of an arbitrary wavefunction as a linear combination of energy eigenfunctions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to spread of Gaussian wave-packet for a free particle in one dimension; wave packets, Fourier transforms and momentum space wavefunction; Position-momentum uncertainty principle.

(10 Lectures)

UNIT-II

3.General discussion of bound states in an arbitrary potential- continuity of wavefunction, boundary condition and emergence of discrete energy levels; application to one-dimensional problem-square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigenfunctions using Frobenius method; Hermite polynomials; ground state, zero point energy & uncertainty principle

(12 Lectures)

UNIT-III

HYDROGEN ATOM PROBLEM

4.Quantum theory of hydrogen-like atoms: Time independent Schrodinger equation in spherical polar coordinates; separation of variables for second order partial differential equation; angular momentum operator & quantum numbers; Radial wavefunctions from Frobenius method; shapes of the probability densities for ground & first excited states; Orbital angular momentum quantum numbers l and m; s, p, d... shells. (10 Lectures)

UNIT-IV

5.Atoms in Electric & Magnetic Fields: Electron angular momentum. Space quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern- Gerlach Experiment. Zeeman Effect: Electron Magnetic Moment and Magnetic Energy, Gyromagnetic Ratio and Bohr Magneton. Normal and Anomalous Zeeman Effect. Paschen Back and Stark Effect (Qualitative Discussion only). (12 Lectures)

UNIT- V

MANY ELECTRON ATOMS

6.Many electron atoms: Pauli's Exclusion Principle. Symmetric & Antisymmetric Wave Functions. Periodic table. Fine structure. Spin orbit coupling. Spectral Notations for Atomic States. Total angular momentum. Vector Model. Spin-orbit coupling in atoms-L-S and J- J couplings. Hund's Rule. Term symbols. Spectra of Hydrogen and Alkali Atoms (Na etc.).(**10 Lectures**)

BSC PHYSICS-CC- 8 LAB – Quantum Mechanics and applications LAB Credit: 01 – Hours: 01/ week – 30 hours Use C/C⁺⁺/Scilab for solving the following problems based on Quantum

Mechanics like

1. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the

hydrogen atom: $\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2M}{\hbar^2}[V(r) - E] \text{ where } V(r) = -\frac{e^2}{r}$

Here, m is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wavefunctions. Remember that the ground state energy of the hydrogen atom is \approx - 13.6 eV. Take e = 3.795 (eV Å)^{1/2}, ħ c = 1973 (eV Å) and m = 0.511x10⁶ eV/c².

Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wavefunction. Take e = 3.795 (eV Å)^{1/2}, $m = 0.511 \times 10^6$ eV/c², and a = 3 Å, 5 Å, 7 Å. In these units $\hbar c = 1973$ (eV Å). The ground state energy is expected to be above - 12 eV in all three cases.

2. Solve the s-wave radial Schrodinger equation for a particle of mass m:

 $d^{2y} = A(r)u(r), A(r) = {}^{2N} [V(r) - E]$ For the anharmonic oscillator potential $V(r) = {}^{1} \frac{kr^{2} + {}^{1} br^{3}}{2}$

for the ground state energy (in MeV) of particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose $m = 940 \text{ MeV/c}^2$, $k = 100 \text{MeV} \text{ f m}^{-2}$, b = 0, 10, 30 MeV f m⁻³ In these units, c $\hbar = 197.3$ MeV fm. The ground state energy I expected to lie between 90 and 110 MeV for all three cases.

3. Solve the s-wave radial Schrodinger equation for an atom:

$$\frac{\mathrm{d}^2 y}{\mathrm{d}r^2} = A(r)u(r), A(r) = \frac{2N}{\hbar^2} \left[V(r) - E\right]$$

where m is the reduced mass of the system (which can be chosen to be the mass of an

electron), for the screened coulomb potential $V(r) = -\frac{e^2}{r} e^{-\frac{r}{a}}$

4. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule: $\frac{d^{2}y}{dr^{2}} = A(r)u(r), A(r) = {}^{2\mu} \left[\frac{V(r)}{\hbar^{2}} - E \right]$ Where μ is the reduced mass of the two-atom system for the Morse potential $V(r) = D \left(e^{-2\alpha r^{F}} - e^{-\alpha r^{F}} \right), r^{u} = \frac{r - r^{0}}{r^{2}}$

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function. Take: $m = 940 \times 10^6 \text{ eV/C}^2$, D = 0.755501 eV, $\alpha = 1.44$, $r_0 = 0.131349 \text{ Å}$

Laboratory based experiments:

- 5. Study of Electron spin resonance- determine magnetic field as a function of the resonance frequency
- 6. Study of Zeeman effect: with external magnetic field; Hyperfine splitting
- 7. To show the tunneling effect in tunnel diode using I-V characteristics.
- 8. Quantum efficiency of CCDs

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam B.SC. PHYSICS MODEL PAPER FOR IV SEMESTER

QUANTUM MECHANICS & ITS APPLICATIONS – CC-8

Time: 3 Hrs

Max. Marks: 75

SECTION – A

Answer all Questions of the following $[5 \times 10 = 50]$

1. Derive Time Dependent Schrodinger Equation and also the Time Independent Schrodinger Equation from it.

[OR]

Explain the propagation and the spread of a wave packet for a free particle in Quantum mechanics.

Derive an expression for the allowed Energy values and the corresponding Eigen functions for a particle moving in a one-dimensional infinite Potential well.

2. Derive an expression for the allowed Energy values and the corresponding Eigen functions for a particle moving in a one-dimensional finite Potential well.

[OR]

Derive an expression for the allowed Energy values and the corresponding Eigen functions for a particle moving in a one-dimensional Harmonic oscillator Potential well.

3. Obtain expressions for the allowed Eigen values and the corresponding Eigen functions for the Orbital Angular Momentum operator in Quantum mechanics.

[OR]

Obtain expressions for Radial Wavefunctions for the electron in a Hydrogen atom by solving the differential equation for the radial part of Schrodinger's equation using Frobenius method and also explain about the allowed energy values and the corresponding Eigen functions.

4. Explain the experimental arrangement, theory and the conclusions of the Stern-Gerlach experiment with neat diagrams.

[OR]

Explain the Normal and Anomalous Zeeman effects. Derive the Anomalous Zeeman splitting using the vector Atom model.

5. Explain the salient features of the Alkali spectra. Explain also the Fine structure (Double structure) in Alkali spectra.

[OR]

Explain Spin-Orbit interaction and derive an expression for Doublet separation due to Spin-orbit interaction in Alkali spectral lines.

SECTION – B Answer any FIVE Questions of the following $[5 \times 5 = 25]$

- 6. Evaluate the commutator $[\widehat{x^3}, \widehat{p_x^2}]$
- 7. Derive an expression for the Probability Current density for a particle moving in one dimension using Schrodinger equation.
- 8. Evaluate the standard deviation of the position coordinate for a one-dimensional Quantum simple Harmonic oscillator in its ground state.
- 9. Explain about the zero-point energy of a Quantum Harmonic oscillator.
- 10. Prove explicitly the commutation relations among the component operators of the Orbital angular momentum.
- 11. Draw neatly the shapes of probability densities for the ground and the first excited states the electron in a Hydrogen atom.
- 12. Explain about Gyromagnetic ratio and Bohr Magneton.
- 13. Explain the paschen back effect in atomic spectra with a neat diagram.
- 14. Explain about the L-S and J-J coupling in multi electron atoms.
- 15. Explain about the Hund's rule and the term symbols.

V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS

[2022-23 Batch onwards]

II Year BSC Physics: IV Semester

CC-9: SOLID STATE PHYSICS

Work load:60 hrs per semester

4 hrs/week

On successful completion of this course, the student will be able to:

- a. To get the exposure about the geometrical and Algebraical descriptions of crystal structure and also about the determination of crystal structure
- b. To understand the elementary Lattice Dynamics and apply it to understand about the basic aspects of Specific heat of solids
- c. To comprehend the theoretical & experimental aspects of Magnetic and Dielectric Properties of Matter
- *d.* To understand and apply elementary band theory to understand the conduction properties of various solid materials
- e. To get acquainted with the basic aspects of Ferroelectricity & Superconductivity

Learning Objectives :

- 1. To understand the geometrical as well as the Vectorial descriptions of Crystal structure and also about the methods of determination of crystal structure
- 2. To comprehend the fundamentals of the Lattice Dynamics and apply to understand the variation of specific Heats of solids with Temperature
- 3. To understand the theoretical and experimental aspects of the Magnetic and the Dielectric properties of matter
- 4. To understand the Band theory of solids to distinguish between conductors, Semiconductors and Insulators
- 5. To understand the basic aspects of the Ferroelectricity & the Superconductivity

Skill Component :

Unit – I :

- 1. Geometrical calculations of periodicity and symmetries in crystal structures
- 2. Analysis of X ray Diffraction patterns of various samples

Unit – II :

- 1. Calculations of the fundamental normal mode frequencies of model systems identical to lattices in solids using a computer
- 2. Analyzing phonon spectra

Unit – III:

- 1. Measurement of Magnetic susceptibility and Dielectric constant
- 2. Apply & analyze the Hysteresis curves of ferromagnetic materials which are used in daily life applications (electrical motor cores, Electro magnets etc
- 3. Apply & analyze the insulating properties liquids useful in Electrical devices (Transformer oil etc) Unit IV :
- 1. Band theory calculations of simple one dimensional systems using a computer
- 2. Apply & analyze the Band diagrams of solids which are useful in daily applications Unit V :
 - 1. Develop the skills in the design aspects of ferroelectric Supercapacitors
 - 2. Analyze & apply the properties of piezo electric materials to design simple & low cost Electro mechanical devices.
 - 3. Develop the skills in designing various simple devices which exploits the phenomenon of superconductivity.

PHYSICS-CC - 9: SOLID STATE PHYSICS (Credits: Theory-04, Practicals-02) Theory: 60 Lectures

UNIT- I

1.Crystal Structure: Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis – Central and Non-Central Elements. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Atomic and Geometrical Factor.
(12 Lectures)

UNIT- II

2.Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear Mono atomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids. T³ law

(10 lectures)

UNIT-III

3.Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of Dia and Paramagnetic Domains. Quantum Mechanical Treatment of Para magnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.
 (8 Lectures)

4.Dielectric Properties of Materials: Polarization. Local Electric Field at an Atom. Depolarization
 Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric
 Polarizability. Normal and Anomalous Dispersion. Cauchy and Selmer relations. Langevin-Debye
 equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma
 Frequency, Plasmons, TO modes. (8 Lectures)

UNIT- IV

5.Elementary band theory: Kronig Penny model. Band Gap. Conductor, Semiconductor (P and N type) and insulator. Conductivity of Semiconductor, mobility, Hall Effect. Measurement of conductivity (04 probe method) & Hall coefficient. (10 Lectures)

UNIT- V

6.Ferroelectric Properties of Materials: Structural phase transition, Classification of crystals, Piezoelectric effect, Pyroelectric effect, Ferroelectric effect, Electro strictive effect, Curie-Weiss Law, Ferroelectric domains, PE hysteresis loop. (6 lectures) 7.Superconductivity: Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect. Idea of BCS theory (No derivation) (6 Lectures)

Reference Books:

PHISICS PRACTICAL-CC- 9 LAD

Credit: 01 - Hours: 02/ week - 30 Lectures

- 1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube Method)
- 2. To measure the Magnetic susceptibility of Solids.
- 3. To determine the Coupling Coefficient of a Piezoelectric crystal.
- 4. To measure the Dielectric Constant of a dielectric Materials with frequency
- 5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR)
- 6. To determine the refractive index of a dielectric layer using SPR
- 7. To study the PE Hysteresis loop of a Ferroelectric Crystal.
- 8. To draw the BH curve of Fe using Solenoid & determine energy loss from Hysteresis.
- 9. To measure the resistivity of a semiconductor (Ge) with temperature by four-probe method (room temperature to 150 °C) and to determine its band gap.
- 10. To determine the Hall coefficient of a semiconductor sample.

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam B.SC. PHYSICS MODEL PAPER FOR III SEMESTER

SOLID STATE PHYSICS – CC-9

Time: 3 Hrs

Max. Marks: 75

SECTION – A Answer all Questions of the following $[5 \times 10 = 50]$

1. Draw the unit cells of all the Bravais Lattices of all the Lattice systems and mention the unit cell parameters for each.

[OR]

Derive the expressions for Form factor and Structure factor. Explain Laue's conditions for the Bright spots in the Xray Diffraction experiments.

2. Derive expressions for the Normal mode frequencies of the vibrations of a Diatomic Linear chain of atoms.

[OR]

Explain the Einstein's theory of variation of Specific heats of solids with Temperature.

3. Explain the Currie – Weiss's theory of Ferromagnetism.

[OR]

Derive the expressions for Electronic and Orientational polarizabilities.

4. Distinguish between Conductors, Semiconductors and Insulators with neat diagrams. [OR]

Explain the Hall effect with a neat diagram. Derive expression for the Hall coefficient.

5. Explain about the Ferro electric effect and Ferro electric domains. Explain also about P-E Electric Hysteresis loop with a neat diagram.

[OR]

Explain Meissner effect and also explain about Type-I and Type-II superconductors with neat diagrams.

SECTION – B

Answer any FIVE Questions of the following $[5 \times 5 = 25]$

- 6. Explain briefly about Polycrystalline form of a solid material.
- 7. Explain about Reciprocal Lattice vectors.
- 8. Write the differences between Acoustical and Optical phonons.
- 9. Explain Dulong and Petit's law.
- 10. Explain about Hysteresis and Energy losses in a ferromagnetic material.
- 11. Explain about Normal and Anomalous Dispersion in Dielectric materials.
- 12. Write the differences between P- type and N- type semiconductors.
- 13. Explain about the formation of Energy Bands and Energy gaps in solids.
- 14. Explain about Electro strictive effect.
- 15. Explain about Critical Temperature and Magnetic fields of a Superconductor.

V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS [2022-23 Batch onwards] II Year BSC Physics: IV Semester

CC-10: ESSENTIALS OF ANALOG & DIGITAL SYSTEMS AND APPLICATIONS

Work load:60 hrs per semester

4 hrs/week

On successful completion of this course, the student will be able to: *CO-1:* To understand the two modes of conduction in Intrinsic & Extrinsic semiconductors

To understand the Energy level diagrams of both types of semiconductors

To apply the above to understand the working of P-N junction Diode

- **CO-2**: To understand the basic aspects of the characteristics of various configurations of the Bi polar Junction Transistors and apply these to understand and work out the analysis of various configurations of single as well as multi stage Amplifiers and also that of RC coupled Amplifiers
- CO 3 : To comprehend the working mechanism for the sustained oscillations in RC phase Shift , Hartley's and Colpitts' oscillators and also to get acquainted with some Basic aspects of IC s
- CO 4 : To get acquainted with the fundamental aspects of Digital circuits & the basic Aspects of Boolean Algebra and also to know about the simplification of digital Circuits using Boolean algebra
- CO 5: To know about some basic aspects of Arithmetic circuits, Timers and Shift Registers

Learning Objectives:

- 1. To understand the Conduction mechanism in Intrinsic & Extrinsic Semiconductors and use this to understand the conduction mechanism in P-N junction Diode
- 2. To understand the working mechanism of Bipolar Junction Transistors and Amplifiers
- 3. To workout the condition for Sustained oscillations in electronic circuits and use it to understand the working mechanism of some oscillators and also to get acquainted with the basic aspects of IC s
- 4. To enhance understanding about and working out with various fundamental Digital circuits and also the techniques to simplify Digital circuits using Boolean Algebra
- 5. To know about the basic aspects of Arithmetic circuits, Timers and shift Registers

PHYSICS-CC - 10: ESSENTIALS OF ANALOG & DIGITAL SYSTEMS AND APPLICATIONS (Credits: Theory-04, Practicals-02) Theory: 60 Lectures

UNIT- I

1.Semiconductor Diodes: P and N type semiconductors. Energy Level Diagram .Conductivity and Mobility, Concept of Drift velocity. PN Junction Fabrication (Simple Idea). Barrier Formation in PN Junction Diode. Static and Dynamic Resistance. Current Flow Mechanism in Forward and

Reverse Biased Diode. Drift Velocity. Derivation for Barrier Potential, Barrier Width and Current for Step Junction. Current Flow Mechanism in Forward and Reverse Biased Diode. (8 Lectures)

2.Two-terminal Devices and their Applications: (1) Rectifier Diode: Half-wave Rectifiers. Centretapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, Cfilter (2) Zener Diode and Voltage Regulation. Principle and structure of (1) LEDs,

a. Photodiode and (3) Solar Cell.

(5 Lectures)

UNIT-II

3.Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains α and β Relations between α and β . Load Line analysis of Transistors. DC Load line and Q-point. Physical Mechanism of Current Flow. Active, Cutoff and Saturation Regions. (4 Lectures)

4.Amplifiers: Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers, Two stage RC-coupled amplifier and its frequency response, Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise. (9 Lectures)

UNIT-III

5.Sinusoidal Oscillators & CRO: Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitts oscillators, Block Diagram of CRO. Electron Gun, Deflection System and Time Base. Deflection Sensitivity. Applications of CRO: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference.

(7 Lectures)

6.Integrated Circuits(Qualitative treatment only): Active & Passive components. Discrete components. Wafer. Chip. Advantages and drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (basic idea and definitions only). Classification of ICs. Examples of Linear and Digital ICs. (4 Lectures)

UNIT- IV

7.Digital Circuits: Difference between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion. BCD, Octal and Hexadecimal numbers. AND, OR and NOT Gates (]realization using Diodes and Transistor). NAND and NOR Gates as Universal Gates. XOR and XNOR Gates and application as Parity Checkers. (6 Lectures)

8.Boolean algebra: De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Idea of Minterms and Maxterms. Conversion of a Truth table into Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map. (6 Lectures) UNIT- V

9.Arithmetic Circuits: Binary Addition. Binary Subtraction using 2's Complement. Half and FullAdders. Half & Full Subtractors, 4-bit binary Adder/Subtractor.(5 Lectures)

10.Timers: IC 555: block diagram and applications: Astable multivibrator and Monostable multivibrator.

 (3 Lectures)

11.Shift registers: Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parallel- in-
Parallel-out Shift Registers (only up to 4 bits).(3 Lectures)

BSC PHYSICS PRACTICAL-CC-10 LAB

Credit: 01 – Hours: 02 - 30 Lectures/ semester

- 1. To measure (a) Voltage, and (b) Time period of a periodic waveform using CRO.
- 2. To test a Diode and Transistor using a Multimeter.
- 3. To design a switch (NOT gate) using a transistor.
- 4. To verify and design AND, OR, NOT and XOR gates using NAND gates.
- 5. To design a combinational logic system for a specified Truth Table
- 6. To convert a Boolean expression into logic circuit and design it using logic gate ICs.
- 7. To minimize a given logic circuit.
- 8. Half Adder, Full Adder and 4-bit binary Adder.
- 9. Half Subtractor, Full Subtractor, Adder-Subtractor using Full Adder I.C.
- 10. To build Flip-Flop (RS, Clocked RS, D-type and JK) circuits using NAND gates.
- 11. To study V-I characteristics of PN junction diode, and Light emitting diode.
- 12. To study the V-I characteristics of a Zener diode and its use as voltage regulator.
- 13. Study of V-I & power curves of solar cells, and find maximum power point & efficiency.
- 14. To study the characteristics of a Bipolar Junction Transistor in CE configuration.
- 15. To study the various biasing configurations of BJT for normal class A operation.
- 16. To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.
- 17. To study the frequency response of voltage gain of a RC-coupled transistor amplifier.
- 18. To design a Wien bridge oscillator for given frequency using an op-amp.

- 19. To design a phase shift oscillator of given specifications using BJT.
- 20. To study the Colpitt's oscillator.
- 21. To design a digital to analog converter (DAC) of given specifications.
- 22. To study the analog to digital convertor (ADC) IC.

Reference Books:

49. 2. The question paper setters are also requested to set the questions based on problems (conceptual or numerical) for a total of 20 marks.

Dr. V.S.Krishna Governemnt Degree College (A), Visakhapatnam B.SC. PHYSICS MODEL PAPER FOR IV SEMESTER

Essentials of Analog & Digital systems and applications - CC-10

Time: 3 Hrs

Max. Marks: 75

SECTION – A

Answer all Questions of the following $[5 \times 10 = 50]$

1. Explain about the fabrication of PN junction and barrier formation of PN junction diode.

[OR]

Explain about the construction and the working of a Bridge type Full wave rectifier.

2. Explain about the I-V characteristics of Common emitter (CE) configuration Transistor circuit.

[OR]

Explain about the two stage RC coupled amplifier and its frequency response.

3. Explain about the Cathode ray Oscilloscope (CRO) with a neat Block diagram. [OR]

Explain the advantages and the drawbacks of Integrated circuits.

4. Show that the NAND and the OR gates are universal gates.

[OR]

State and explain De Morgan's theorems.

5. Explain about the construction and the working of Half adder and Full adder.

[OR]

Explain about the working of Astable multivibrator with a neat block diagram.

SECTION – B

Answer any FIVE Questions of the following [5 X 5 = 25]

- 6. Explain about the current flow mechanism in a PN junction diode in both biases.
- 7. Explain how Zener diode acts as a Voltage regulator.
- 8. Derive the relation between α and β in a transistor.
- 9. Explain about Fixed bias and Voltage divider bias.
- 10. Explain the Barkhausen's criterion for sustained oscillations.
- 11. Explain about very large scale integrated circuits.
- 12. Explain about XOR and XNOR logic gates.
- 13. Write about Parallel in and parallel out shift registers.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS

[2022-23 Batch onwards]

II Year BSC Physics: IV Semester

CC-11: ESSENTIALS OF STATISTICAL MECHANICS & ELECTROMAGNETIC THEORY

Work load:60 hrs per semester

4 hrs/week

On successful completion of this course, the student will be able to:

CO-1: To understand the basic concepts of Classical as well as Quantum statistics and also apply them to understand about three kinds of Distributions based on Distinguishability & Indistinguishability of the identical particles

CO-2 : To comprehend the experimental aspects of Black body radiation and also will be able to understand the theoretical aspects of Black body radiation using not only the Classical but also the Quantum theory of radiation

CO-3: To understand to derive Maxwell's Electromagnetic equations and also understand the introduction of Displacement Current. To understand about the Boundary conditions at interfaces, Poynting theorm and various densities

CO-4: To understand the experimental and theoretical aspects of the Polarization Phenomenon of the Light and also about the phenomenon of optical Rotation exhibited by a Plane polarized light

CO-5: To comprehend the fundamental aspects of propagation of EM waves in Bounded media and the basic principles involved in the propagation of a Light signal through an Optical Fiber

Learning Objectives:

- 1. To understand the basic concepts of Classical & Quantum Statistics and also Maxwell-Boltzmann, Fermi-Dirac and Bose-Einstein distribution of identical particles
- 2. To understand the experimental & the Theoretical aspects of the Classical as well as the Quantum theories of Radiation
- 3. To derive the four Maxwell's Electromagnetic Equations and work out with them to understand many theoretical aspects of Electromagnetic waves and also about Boundary conditions exhibited by Electric & Magnetic field Vectors at an interface between two media
- 4. To understand about the Polarization phenomenon of Light & the phenomenon of Optical Rotation

5. To understand about the propagation of the Light through Bounded media and that of a Light signal through an Optical Fiber

Skill components :

Unit – I :

- 1. Work out with the probability distribution functions and calculations using them
- 2. To apply the abstract concepts like Entropy to understand and analyze the daily life applications

Unit – II :

- 1. Learn to do some quick calculations regarding the temperature of the sun using Stefan Boltzmann law
- 2. Apply the Blackbody radiation characteristics to understand the spectral distribution of Radiation from various stars and also apply to make various simple devices to use solar energy

Unit – III :

- 1. Learn to apply the Maxwell's equations for different media and to use the analysis to make some simple devices
- 2. Learn to study the propagation laws of EM radiation in Environment and to analyze the functioning of various devices and equipment in daily life and also to design some simple equipment

Unit – IV :

- 1. Apply & analyze the Polarization phenomenon of the light, materials and their properties which affects the Polarization of the light to understand various devices and equipment and also learn to design some simple devices
- Apply & analyze the phenomenon the phenomenon of Optical rotation of the linearly polarized light to use it to design some simple low cost equipment to measure the concentration of some low cost solutions

Unit – V :

- 1. Learn to do simple calculations of reflection & transmission coefficients for various media interface and apply them to make various devices involving optical reflection & transmission
- 2. Enhance the understanding of various applications of Optical Fibers and also learn to analyze and design simple low cost devices using Optical Fibers

PHYSICS-CC - 11: ESSENTIALS OF STATISTICAL MECHANICS & ELECTROMAGNETIC THEORY (Credits: Theory-04, Practical-01) Theory: 60 Lectures

UNIT- I

1.Classical & Quantum Statistics: Microstates & Microstate, Elementary Concept of Ensemble, Phase Space, Entropy and Thermodynamic Probability, Maxwell-Boltzmann Distribution Law, Fermi – Dirac Distribution law, Bose – Einstein Distribution law, Partition Function, Thermodynamic Functions of an Ideal Gas, Classical Entropy Expression, (**12 Lectures**)

UNIT- II

2.Classical Theory of Radiation: Properties of Thermal Radiation. Blackbody Radiation, Pure temperature dependence. Kirchhoff's law. Stefan-Boltzmann law: Thermodynamic proof. Radiation Pressure. Wien's Displacement law. Wien's Distribution Law. Rayleigh-Jean's Law. Ultraviolet Catastrophe.
 (8 Lectures)

3.Quantum Theory of Radiation: Spectral Distribution of Black Body Radiation. Planck's Quantum Postulates. Planck's Law of Blackbody Radiation: Experimental Verification. Deduction of (1) Wien's Distribution Law, (2) Rayleigh-Jeans Law, (3) Stefan-Boltzmann Law,

(4) Wien's Displacement law from Planck's law. (6 Lectures)

UNIT-III

4.Maxwell Equations of Electromagnetic Theory: Review of Maxwell's equations. Displacement Current. Vector and Scalar Potentials. Gauge Transformations: Lorentz and Coulomb Gauge. Boundary Conditions at Interface between Different Media. Wave Equations. Plane Waves in Dielectric Media. Poynting Theorem and Poynting Vector. Electromagnetic (EM) Energy Density. Physical Concept of Electromagnetic Field Energy Density, Momentum Density and Angular Momentum Density. (**10 Lectures**)

5.Polarization of Electromagnetic Waves: Description of Linear, Circular and Elliptical Polarization. Propagation of E.M. Waves in Anisotropic Media. Symmetric Nature of Dielectric Tensor. Fresnel's Formula. Uniaxial and Biaxial Crystals. Light Propagation in Uniaxial Crystal. Double Refraction. Polarization by Double Refraction. Nicol Prism. Ordinary & extraordinary refractive indices. Production & detection of Plane, Circularly and Elliptically polarized Light. Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet Compensator and its Uses. Analysis of Polarized Light (10 Lectures)

UNIT - IV

6.Rotatory Polarization: Optical Rotation. Biot's Laws for Rotatory Polarization. Fresnel's Theory of optical rotation. Calculation of angle of rotation. Experimental verification of Fresnel's theory. Specific rotation. Laurent's half-shade polarimeter. (3 Lectures)

UNIT - V

7.EM Waves in Bounded Media: Boundary conditions at a plane interface between two media.
 Reflection & Refraction of plane waves at plane interface between two dielectric media-Laws of Reflection & Refraction. Fresnel's Formulae for perpendicular & parallel polarization cases, Brewster's law. Reflection & Transmission coefficients. Total internal reflection, evanescent waves. Metallic reflection (normal Incidence) (9 Lectures)

8.Optical Fibers:- Numerical Aperture. Step and Graded Indices (Definitions Only). Single and Multiple Mode Fibers (Concept and Definition Only). (2 Lectures)

Reference Books:

- 12. Modern Thermodynamics with Statistical Mechanics, Carl S. Helrich, 2009, Springer
- An Introduction to Statistical Mechanics & Thermodynamics, R.H. Swendsen, 2012, Oxford Univ. Press

Additional Books for Reference

- 14. Electromagnetic Fields & Waves, P.Lorrain & D.Corson, 1970, W.H.Freeman & Co.
- 15. Electromagnetics, J.A. Edminster, Schaum Series, 2006, Tata McGraw Hill.
- Electromagnetic field theory fundamentals, B. Guru and H. Hiziroglu, 2004, Cambridge University Press

BSC PHYSICS PRACTICAL-CC 11 LAB

Credit: 01 – Hours: 02/ week - 60 sessions/ semester

- 1. To verify the law of Malus for plane polarized light.
- 2. To determine the specific rotation of sugar solution using Polarimeter.
- 3. To analyze elliptically polarized Light by using a Babinet's compensator.
- 4. To study dependence of radiation on angle for a simple Dipole antenna.
- To determine the wavelength and velocity of ultrasonic waves in a liquid (Kerosene Oil, Xylene, etc.) by studying the diffraction through ultrasonic grating.
- 6. To study the reflection, refraction of microwaves
- 7. To study Polarization and double slit interference in microwaves.
- 8. To determine the refractive index of liquid by total internal reflection using Wollaston's air- film.
- 9. To determine the refractive Index of (1) glass and (2) a liquid by total internal reflection using a Gaussian eyepiece.
- 10. To study the polarization of light by reflection and determine the polarizing angle for airglass interface.
- 11. To verify the Stefan's law of radiation and to determine Stefan's constant.

12. To determine the Boltzmann constant using V-I characteristics of PN junction diode. Use $C/C^{++}/Scilab/other$ numerical simulations for solving the problems based on Statistical Mechanics like

- 13. Computational analysis of the behavior of a collection of particles in a box that satisfy Newtonian mechanics and interact via the Lennard-Jones potential, varying the total number of particles N and the initial conditions:
 - Study of local number density in the equilibrium state (i) average; (ii) fluctuations
 - Study of transient behavior of the system (approach to equilibrium)
 - Relationship of large N and the arrow of time
 - Computation of the velocity distribution of particles for the system and comparison with the Maxwell velocity distribution
 - Computation and study of mean molecular speed and its dependence on particle mass
 - Computation of fraction of molecules in an ideal gas having speed near the most probable speed

- 14. Computation of the partition function $Z(\beta)$ for examples of systems with a finite number of single particle levels (e.g., 2 level, 3 level, etc.) and a finite number of non-interacting particles N under Maxwell-Boltzmann, Fermi-Dirac and Bose-Einstein statistics:
 - Study of how Z(β), average energy <E>, energy fluctuation ΔE, specific heat at constant volume Cv, depend upon the temperature, total number of particles N and the spectrum of single particle states.
 - Ratios of occupation numbers of various states for the systems considered above
 - Computation of physical quantities at large and small temperature T and comparison of various statistics at large and small temperature T.
- 15. Plot Planck's law for Black Body radiation and compare it with Raleigh-Jeans Law at high temperature and low temperature.
- Plot Specific Heat of Solids (a) Dulong-Petit law, (b) Einstein distribution function, (c) Debye distribution function for high temperature and low temperature and compare them for these two cases.
- 17. Plot the following functions with energy at different temperatures
 - Maxwell-Boltzmann distribution
 - Fermi-Dirac distribution
 - Bose-Einstein distribution

Dr. V.S. Krishna Government Degree College (A) , Visakhapatnam B.SC. PHYSICS MODEL PAPER FOR III SEMESTER (ESSENTIALS OF STATISTICAL MECHANICS & ELECTROMAGNETIC THEORY)– CC-11 Time: 3 Hrs Max. Marks: 75

SECTION – A

Answer all Questions of the following $[5 \times 10 = 50]$

1. Derive an expression for Equilibrium Probability distribution of a system of particles obeying Maxwell – Boltzmann Statistics.

[OR]

Derive an expression for Partition Function of an Ideal gas and also derive Thermodynamic functions from it.

2. Explain Rayleigh – Jean's law of Blackbody Radiation and derive an expression for the Monochromatic Emissive power of the Blackbody Radiation using Rayleigh – Jean's law.

[OR]

Explain Planck's law of Blackbody radiation and derive an expression for the Monochromatic Emissive power for the Blackbody Radiation using Planck's law.

3. Derive Maxwell's equations of Electromagnetic theory in Integral form and then also in Differential form in vacuum.

[OR]

State and prove Poynting's theorm.

4. Explain the construction and the working of Nicol Prism.

[OR]

Explain the construction and the working of a Laurent's Half shade Polarimeter.

5. Derive the Fresnel's expressions for Reflection and Transmission coefficients for the Spolarization of a monochromatic plane Electromagnetic wave incident at the plane interface between two different Dielectric media.

[OR]

Explain about various types of Optical Fibers and also explain how a light signal is propagated through each of them.

SECTION-B

Answer any FIVE Questions of the following

- 6. Derive the relation between the Entropy and the number of Microstates.
- 7. Define an Ensemble and explain about various kinds of Ensembles with suitable examples.

5 X 5 = 25 Marks

- 8. Explain Wein's displacement law of Blackbody radiation.
- 9. Deduce Wein's and Rayleigh-Jeans distribution laws of Blackbody radiation from that of Planck's.
- 10. Explain Scalar and Vector potentials.
- 11. Explain briefly about Lorentz and Coulomb Gauge.
- 12. Explain the phenomenon of double Refraction with neat diagrams.
- 13. Explain the phenomenon of Optical rotation and also about specific Rotation power.
- 14. Explain the phenomenon of Total Internal Reflection with neat diagram.
- 15. Define the terms Numerical Aperture and Acceptance angle.

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM BSC PHYSICS SYLLABUS UNDER CBCS

[2022-23 Batch onwards]

I Year BSC Physics – GEC-2 / MINOR PHYSICS-2: IV Semester

Electromagnetism, Electronics & Nano Materials

Work load:60 hrs per semester

4 hrs/week

Course outcomes:

On successful completion of this course, the students will be able to:

- **CO 1 :** To learn to understand & apply the basic laws of Electrostatics , Magnetostatics and also the phenomenon of Electromagnetic Induction
- **CO 2 :** To get acquainted with the basics of AC circuits and also about the fundamental aspects of Maxwell's equations & Electromagnetic waves
- **CO 3 :** To get with the working and principles involved in devices of Basic Electronics like Filters, Transistors and Amplifiers

CO 4: To understand the elementary aspects of the Digital Electronics

CO 5 : To know about the properties & various preparation methods of Nano materials and about the Characterization of the Nano Materials

UNIT -I:

1. Electrostatics and magnetic field

Electric field, potential due to a charge distribution and due to a dipole, electrical potential energy, flux, Gauss's law, electric field in a dielectric, polarization, energy stored in an electric field. Magnetic field due to a current-carrying conductor, Biot Savart law, magnetic force on a current, Lorentz force.

(8 Lectures)

2. Electromagnetic Induction & Magnetism:

Electromagnetic induction, Lenz's law , magnetic properties of matter, para- dia- and ferromagnetism,

Hysteresis Curve, Super Para Magnetism, spinning of a magnetic dipole in an external magnetic field.

(4 Lectures)

UNIT – II :

Basic aspects of AC Circuits : Differences between AC & DC currents , Average & RMS values of an AC signal , AC RC circuit , AC LR Circuit , AC LC circuit , LCR series & parallel Resonance circuits , Power factor , Q – factor (5 Lectures)

4. Maxwell's Equations & Electromagnetic waves:

Modification of Ampere's law, equation of continuity and displacement current, Maxwell's equations, wave equation and its plane wave solution, nature of electromagnetic waves, transversality and polarization, propagation of electromagnetic plane waves in dielectric media. (6 Lectures)

UNIT – III :

5.Electronics:

Half-wave, full-wave and bridge rectifiers, ripple factor, rectification efficiency, filters (series in inductor, shunt capacitator, LC and π sections), voltage regulations, load regulation, Zener diode as voltage regulator. Characteristic curves of bipolar transistors, static and dynamic load line, biasing (fixed and self) of transistor circuit, thermal instability of bias, the black box idea of CE, CB and CC transistor circuits as two-port network, small signal active output, hybrid model of a CE transistor circuit, analysis of a small signal amplifier: its voltage and current gains, negative and positive feedback. Barkhausen's criterion for self-sustaining oscillations, LC and phase shift oscillators. (**15 Lectures**)

UNIT – IV :

6.Digital electronics:

Number systems (binary, BCD, octal and hexadecimal), 1's and 2's complements. Logic gates, AND, OR, NAND, NOR, XOR and NXOR. Boolean algebra (Boolean laws and simple expressions), binary adders, half adder, half subtractor, full adder and full subtractor. (**10 Lectures**)

UNIT – V:

7.Nano Materials: Classification of Nano Materials (0-D, 1-D, 2-D, 3-D), Surface to Volume Ratio, Quantum Confinement, Properties of Nano Materials, Methods of Preparation of Nano Materials - Top down approach (Ball mill method ,Electron Beam Lithography), Bottom Up approach (Sol Gel Method , Electrolysis method , Physical vapor Deposition method , Chemical vapor Deposition method , Sputtering method , Solvo - Thermal Method), Applications of Nano materials

8.Characterization of Nano Materials : Basic aspects of X ray Fluorescence & X ray Diffraction , Construction & working of Transmission Electron Microscope and Scanning Electron Microscope, Qualitative aspects of Scanning Tunneling Microscope and Atomic Force Microscope.

(5 Lectures)

Recommended Text books/References:

1. Griffiths, D. J. Introduction to Electromagnetism 3rd Ed. Prentice-Hall (1999).

2. Malvino, A.P. & Leach, D. P. Digital Principles and Applications, Tata McGraw-Hill (2008).

3. Ryder, J. D. *Electronic Fundamentals and Applications: Integrated and Discrete Systems.* 5th Ed. Prentice-Hall, Inc. (2007).

4. Floyd, T. L. & Buchla, D. M. *Electronics Fundamentals: Circuits, Devices and Applications* (8th Ed.) Prentice-Hall (2009).

- 6. V. Rajendran, Engineering Physics, Tata McGraw hill publishers (2010)

MINOR PHYSICS – 2 PRACTICALS

Credit: 01 - Hours: 02/ week - 30 sessions/ semester

1. Ballistic Galvanometer: resistance, current sensitivity, charge sensitivity, and critical damping resistance of the galvanometer.

- 2. Determination of high resistance by leakage method.
- 3. Determination of mutual inductance by Ballistic Galvanometer.
- 4. Operations and measurements by Cathode Ray Oscilloscope (CRO). Calibration of DC and AC

voltages, frequency and phase measurements of a signal.

- 5. Study of transistor characteristics (CB, CE, CC configurations).
- 6. Study of power supply (rectification factor, voltage and load regulation for C, L, CL and π filters).
- 7. Study of basic RC coupled amplifier (frequency response and band width).
- 8. Self-inductance measurement by Owen's bridge.
- 9. Measurement of magnetic field by search coil.
- 10. To verify experimentally OR, AND, NOT, NOR, NAND gates.
Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM II BSC PHYSICS Hons SYLLABUS (w.e.f. 2022-23)

		150			

Note: 1.The question paper setters are requested to kindly adhere to the format given in the above table.

2.The question paper setters are also requested to set the questions based on problems (conceptual or numerical) for a total of 20 marks.

Dr. V.S. Krishna Government Degree College (A), Visakhapatnam

B.SC. PHYSICS MODEL PAPER FOR IV SEMESTER Electromagnetism, Electronics & Nano

Materials – MP-2

Model paper

Time: 3 Hrs

Max. Marks: 75

SECTION – A

Answer all Questions of the following $[5 \times 10 = 50]$

1. State Biot-Savart's law. Explain about the magnetic field due to a current carrying wire.

[OR]

Explain about Hysteresis curve with a neat diagram.

2. Explain about Impedance, Admittance and Reactance in an AC LR circuit.

[OR]

Derive the four Maxwell's equations of Electromagnetic theory.

3. Explain the input as well as the output characteristics of a Transistor in CE configuration.

[OR]

Explain the operation of Zenor diode as a voltage regulator.

4. Give a brief account of OR, AND, NOT, NOR & NAND logic gates.

[OR]

Explain the working of Half adder and Full Adder with the Truth tables.

5. Explain any three methods of preparation of Nano materials by using Bottom up approach.

[OR]

Explain the construction and the working of Transmission Electron Microscope (TEM).

SECTION – B

Answer any FIVE Questions of the following [5 X 5 = 25]

- 6. Explain Gauss' law of Electrostatics.
- 7. Explain about Lorentz force.
- 8. Write the differences between AC & DC currents.
- 9. Explain about the modification of Ampere's law by Maxwell.
- 10. Write a short note on Bipolar Transistor.
- 11. Convert the decimal number 225.225 into Binary system.
- 12. Explain about the classification of Nano materials (0-D, 1-D, 2-D, 3-D).
- 13. Write a short note on XRD technique.

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year BSC Physics: V Semester ELECTIVE -EA-1: LOW TEMPERATURE PHYSICS & REFRIGERATION (Credits: 04)

Work load: 60 hrs per semester

4 hrs/week

Learning Outcomes:

Students after successful completion of the course will be able to

- 1. Identify various methods and techniques used to produce low temperatures in the Laboratory.
- 2. Acquire a critical knowledge on refrigeration and air conditioning.
- 3. Demonstrate skills of Refrigerators through hands on experience and learns about

Refrigeration components and their accessories.

- 4. Understand the classification, properties of refrigerants and their effects on environment.
- 5. Comprehend the applications of Low Temperature Physics and refrigeration.

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year B.Sc Physics: V Semester ELECTIVE -EA-1: LOW TEMPERATURE PHYSICS & REFRIGERATION (Credits: 04) Work load: 60 hrs per semester 4 hrs/week

UNIT-I

PRODUCTION OF LOW TEMPERATURE

Production of low temperatures-Introduction, Freezing mixtures, Joule-Thomson effect, Regenerative cooling, Different methods of liquefaction of gases, liquefaction of air, Production of liquid hydrogen and nitrogen, *liquefaction of Helium Kapitza method* Adiabatic demagnetization, Properties of materials at low temperatures, Superconductivity

UNIT-II

MEASUREMENT OF LOW TEMPERATURE

Gas thermometer its correction and calibration. Secondary thermometers, resistance thermometers, thermocouples, Vapour pressure thermometers, Magnetic thermometers, *Electronic thermometers*, Advantages and drawbacks of each type of thermometer.

UNIT-III

PRINCIPLES OF REFRIGERATION

Introduction to Refrigeration- Natural and artificial refrigeration, Stages of refrigeration, Types of refrigeration - Vapor compression and vapor absorption refrigeration systems, Refrigeration cycle and explanation with a block diagram, Introductory ideas on air conditioning. Refrigerants-Introduction, Ideal refrigerant, Properties of refrigerant, Classification of refrigerants, commonly used refrigerants, Eco-friendly refrigerants, *andeffect of refrigerants on ozone layer*.

UNIT-IV

COMPONENTS OF REFIGERATOR

Refrigerator and its working, Block diagram, Coefficient of Performance (COP), Tons of refrigeration (TR) and Energy Efficiency Ratio (EER), Refrigerator components: Types of compressors, evaporators and condensers and their functional aspects, defrosting in a refrigerator, Refrigerant leakage and detection, *applications of refrigerators*.

(10 hrs)

(10 hrs)

(10 hrs)

(10 hrs)

UNIT-V

APPLICATIONS OF LOW TEMPERATURE & REFRIGERATION (10 hrs.)

Applications of Low temperatures: Preservation of biological material, Food freezing, liquid nitrogen and liquid hydrogen in medical field, Superconducting magnets in MRI- Tissue ablation (cryosurgery) - Cryogenic rocket propulsion system. Applications of refrigeration: Domestic refrigerators, Water coolers, Cold storages, Ice plants, Food preservation methods, Chemical and Process industries, Cold treatment of metals, Construction field, Desalination of water, Data centers.

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year BSC Physics: V Semester ELECTIVE -EA-1: LOW TEMPERATURE PHYSICS & REFRIGERATION (Credits: 04)

Work load: 30 hrs per semester

2 hrs/week

Course 6B: Low Temperature Physics & Refrigeration PRACTICAL SYLLABUS (30 Hrs.Max Marks: 50) IV.

Learning Outcomes:

On completion of practical course, student shall be able to

1. List out, identify and handle equipment used in refrigeration and low temperature lab.

2. Learn the procedures of preparation of Freezing Mixtures.

3. Demonstrate skills on developing various Freezing mixtures and materials and their applications in agriculture, medicine and day to day life.

4. Acquire skills in observing and measuring various methodologies of very low temperatures

5. Perform some techniques related to Refrigeration and Freezing in daily life.

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year B.Sc Physics: V Semester ELECTIVE -EA-1: LOW TEMPERATURE PHYSICS & REFRIGERATION (Credits: 04)

Work load: 30 hrs per semester

2 hrs/week

Practical (Laboratory) Syllabus: (30 hrs. Max marks: 50))

1. Record the Principles and applications of Refrigerators and Freezers.

2. Measure the temperatures below Melting point of Ice using a thermometer available in the Lab.

3. Make a freezing mixture by adding different salts viz., Sodium chloride, Potassium Hydrate (KOH), Calcium chloride to ice in different proportions and observe the temperature changes.

4. Study the operation of a refrigerator and understand the working of different parts.

5. Study the properties of refrigerants like chlorofluorocarbons-hydrochlorofluoro- carbons and record the lowest temperatures obtained.

6. Consider a simple faulty refrigerator and try to troubleshoot the simple problems by understanding its working.

7. Understand the practical problem of filling the Freon Gas into the Refrigerator.

8. Get the Liquid Nitrogen or Liquid Helium from nearby Veterinary Hospital and measure their temperatures using chromel-alumel thermocouple or mercury thermometer and observe their physical properties like colour, smell etc and precautions to be taken for their safe handling.

9. Preparation of freeze drying food with Dry ice and liquid nitrogen

10. Preparation of freeze drying food with liquid nitrogen

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year BSC Physics: V Semester ELECTIVE -EA-1: LOW TEMPERATURE PHYSICS & REFRIGERATION (Credits: 04)

Work load: 60 hrs per semester

4 hrs/week

Co-Curricular Activities:

(a) Mandatory:(Training of students by teacher in field related skills: (lab:10 + field: 05)

1. For Teacher: Training of students by the teacher in the in the laboratory/field for a total of not less than 15 hours on the techniques/skills of Low Temperature Production, methods used and applications of Low temperatures and refrigeration in day to day life and other applications in medicine and industry.

2. For Student: Student shall (individually) visit (i) a small ice plant or a cold storage plant (ii) Air Conditioner (AC) repair shop or (iii) Refrigerator repair shop to understand the construction, working principle and the trouble shooting of these devices after interacting with the technicians. Or Student shall observe the various thermodynamic processes taking place while working with the refrigerator and observe the leak detection in refrigeration system by different methods, air removal and charging of a refrigeration unit and testing of a refrigeration system to find out the Refrigerating capacity/Ton of refrigeration (TR) and the Power input. Or Student shall identify the refrigerant cylinder by color coding and standing pressure. Or Student shall visit the freezer aisle of a supermarket and observes the bags of different frozen fruits. Student shall write the observations and submit a hand-written Fieldwork/Project work not exceeding 10 pages in the given format to the teacher.

3. Max marks for Fieldwork/Project work: 05.

4. Suggested Format for Fieldwork/Project work: Title page, student details, index page, details of place visited, observations, findings and acknowledgements.

1. Training of students by related Factory, industrial experts.

2. Assignments (including technical assignments like identifying tools in Refrigerators, Freezers and their handling, operational techniques with safety and security)

3. Seminars, Group discussions, Quiz, Debates etc. (on related topics).

4. Preparation of videos on tools and techniques in Low Temperatures and applications.

5. Collection of material/figures/photos related to substances used in Freezing Mixtures, their Properties and availability etc., writing and organizing them in a systematic way in a file.

6. Visits to Ice plants and labs in universities, research organizations, private firms, etc.

7. Making your own mini refrigerator at home

8. Build your own water cooler with the materials available at home.

9. Making hand launched liquid nitrogen rockets

10. Experiments with Liquid nitrogen and strawberry/ banana/ lemon/ onion/ mushroom/ egg etc. (To be tried under professional supervision only).

11. Invited lectures and presentations on related topics by field/industrial experts

12. Identification of different Ozone-depleting substances (ODS) that damage the ozone layer in the upper atmosphere.

13. Demonstration to illustrate the greenhouse effect and the role of carbon dioxide as a greenhouse gas using plastic water bottles, flood light lamp, beakers and temperature sensors and observe the temperature changes.

TIME: 3 Hrs.

Max.Marks: 75

SECTION-A

Answer all the following questions.

5X10 = 50

Q 1. a) Explain about the Joule-Thomson cooling effect?

Or

- b) Discuss about adiabatic demagnetization method?
- Q 2. a) Discuss about the Gas thermometer its correction and calibration?

Or

- b) Explain advantages and drawbacks of each type of thermometer?
- Q 3. a) Explain about vapour compression and vapour absorption refrigeration systems?

Or

b) Write about the Refrigeration cycle and explain with a block diagram?

Q 4. a) Discuss about different types of compressors in refrigeration?

Or

- b) Explain about different types condensers and their functional aspects?
- Q 5. a) Explain about Superconducting magnets in MRI?

Or

b) Explain about Cryogenic rocket propulsion system?

SECTION-B

Answer any five of the following questions. Q 6. Write about different types of freezing mixtures? Q 7. Explain properties of materials at low temperatures? Q 8. Write about vapour pressure thermometers? Q 9. Explain about Magnetic thermometers? Q 10. Explain properties of Ideal refrigerant ? Q 11.Write about Eco-friendly refrigerants? Q 12. Write about the Coefficient of Performance (COP) of a refrigerator? Q 13. Write about defrosting in a refrigerator? Q 14. Write about the preservation of biological material?

Q15. Write about Food preservation methods?

III Year B.Sc.-Physics Program: V Semester

PHYSICS ELECTIVE-EA-2: NANO MATERIALS AND APPLICATIONS Work load: 60 hrs./ Semester 4 hrs./ Week COURSE OBJECTIVES

The syllabus introduces the basic concepts and principles to understand nanomaterials. Various nanomaterials synthesis/ growth/ preparation methods and characterization techniques are discussed to explore the field. The effect of dimensional confinement of charge carries on the electrical, optical and structural properties are also discussed. The concept of micro- and nano- electro mechanical systems (MEMS and NEMS) and important applications areas of nanomaterials are discussed.

COURSE LEARNING OUTCOME

At the end of the course the student is expected to possess the following concepts:

- In the Nano systems and its implications in modifying the properties of materials at thenanoscale.
- Concept of Quantum confinement, 3D,2D,1D and 0D nanostructure with examples.
- Different synthesis techniques including top down and bottom-up approaches.
- Characterization of nanostructured materials using X-ray diffraction (XRD), electron microscopy (SEM & TEM), Atomic Force Microscopy (AFM) and Scanning Tunneling Microscopy (STM).
- Optical properties of nanostructured materials, modification of band gap, excitonic confinement.
- Applications of nanostructured materials in making devices namely MEMS, NEMS and other heterostructures for solar cell and LEDs.
- The student will synthesize nanoparticles by different chemical routs and characterize them in the laboratory using the different techniques he has learnt in the theory.

BROAD CONTENTS OF THE COURSE

- Nanoscale Systems
- Synthesis of Nanostructure Materials
- Characterization
- Optical Properties
- Applications of Nanomaterials

SKILLS TO BE LEARNED

- Develop basic understanding of nanostructured materials.
- Learn the synthesis and characterization of nanostructured materials.
- Understanding the optical properties of nanostructured materials.
- Basics of electron transport phenomenon.
- Lean to understand the functioning of various analytical techniques:
- XRD, SEM, TEM, STM, AFM etc.
- Application of nanoparticles in various fields like:
- LED, Solar Cells
- Single Electron Transform Devices
- Magnetic Data Storage
- Micro-electrochemical Systems (MEMS)
- Nano- electrochemical Systems (NEMS)

DETAILED CONTENTS OF THE COURSE

UNIT-I

NANOSCALE SYSTEMS: Length scales in physics, Nanostructures: 0D, 1D, 2D and 3D nanostructures (nanodots, nanowires, nanorods, thin films), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation- Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1D, 0D nanostructures and its consequences.

UNIT-II

SYNTHESIS OF NANOSTRUCTURE MATERIALS: Top down and bottom-up approach with examples. Ball milling. Physical vapor deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition. Chemical vapor deposition (CVD), chemical reduction, Sol-Gel., Electron deposition. Spray pyrolysis. Hydrothermal synthesis. MBE growth of quantum dots. Biological methods- Synthesis using micro organisms and bacteria, Synthesis using plant extract.

UNIT-III

CHARACTERIZATION TECHNIQUES: XRD, Optical Microscopy, SEM, TEM, AFM, XPS, Scanning Tunneling Microscopy and PL characterization techniques for nano materials.

UNIT-IV

OPTICAL PROPERTIES: Optical properties by IR and Raman Spectroscopy, Concept of dielectric constant for nanostructures, Quasi-particles and excitons. Excitons in direct and indirect band gap semiconductor nanocrystals. Quantitative treatment of quasi- particles and excitons. **Radiative processes:** General formalization-absorption, emission and luminescence. Optical properties of heterostructures and nanostructures.

UNIT-V

APPLICATIONS OF NANOMATERIALS: Applications of nanoparticles, quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Single electron transfer devices (no derivation). CNT based transistors. Nanomaterial Devices: Quantum dots heterostructure lasers, optical switching and optical data storage. Magnetic quantum well; magnetic dots - magnetic data storage. Micro Electromechanical Systems (MEMS), Nano Electromechanical Systems (NEMS).

PHYSICS ELECTIVE-EA-2 (Practical): NANO MATERIALS LABORATORY Work load: 30 hrs./ Semester – Credit:01 2 hrs./ Week

COURSE OBJECTIVES

The objective of this laboratory component is to give hand on experience in synthesis and characterization of nanomaterials. Analysis of the characterization and data interpretation are also objectives of this course.

COURSE LEARNING OUTCOME

- To get the knowledge of development of nanomaterials.
- To acquire an understanding basics of characterization techniques and analysis of data.

SKILLS TO BE LEARNED

- Development of nanomaterials.
- Characterization of Nanomaterials.

LIST OF EXPERIMENTS

- 1) Determination of the Band Gap of Semiconductor Nanoparticles.
- 2) Synthesis of metal nanoparticles by chemical route.
- 3) Synthesis of semiconductor nanoparticles.
- 4) Synthesis of metal oxide nanoparticles by chemical route.
- 5) Synthesis of metal oxide nanoparticles by Sol-gel method.
- 6) Determination of band gap from the absorption spectra using Tauc's plots..
- 7) XRD pattern of nanomaterials and estimation of particle size.
- 8) To study the effect of size on color of nanomaterials.
- 9) To prepare SW-CNTs with other materials.
- 10) Growth of quantum dots by thermal evaporation.
- 11) Surface Plasmon study of metal nanoparticles by UV-Visible spectrophotometer.

Text Books

- 1. S.K. Kulkarni, Nanotechnology: Principles & Practices (Capital Publishing Company).

Dr. V.S. Krishna Govt. degree College(A), Visakhapatnam MODEL QUESTION PAPER (NANO MATERIALS AND APPLICATIONS) III B.Sc. Physics Program: SEM-V / ELECTIVE EA-2

Time: 3 Hrs

Max. Marks: 75

SECTION – A

Answer all Questions of the following

[5 X 10 = 50]

 (a) Derive an expression for allowed energy values and the corresponding wave functions for a particle in infinite potential well of 1D nanostructures.

[OR]

(b) Derive an expression for allowed energy values and the corresponding wave

functions for a particle in one-dimensional potential box of nanostructures?

2. (a) Explain Top down and bottom-up approaches. [OR]

(b) Discuss Sol-Gel synthesis route?

- 3. (a) Describe the X-Ray Diffraction (XRD) technique to estimate the lattice parameter of nanomaterials? [OR]
 - (b) Discuss the Scanning Electron Microscopy (SEM) with neat diagram.
- 4. (a) Explain the direct and indirect band gapsemiconductor nanocrystals?

[OR]

- (b) Describe the Optical properties of heterostructures and nanostructures.
- 5. (a) Discuss optical switching and optical data storage in nanostructures.

[OR]

(b) Explain Nano Electromechanical Systems (NEMS).

SECTION – B

Answer any <u>FIVE</u> Questions

- 6. Define density of states of 0D, 1D, 2D and 3D nanomaterials.
- 7. Explain the concept of Quantum confinement.
- 8. Explain the Pulsed Laser deposition method.
- 9. Discuss Hydrothermal method.
- 10. Explain the Concept of dielectric constant for nanostructures.
- 11. Write a short note on Optical Microscopy.
- 12. Write any five Applications of nanoparticles.
- 13. What is photonic device. Explain with example.

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year BSC Physics: V Semester ELECTIVE EA-3 : COMMUNICATION ELECTRONICS ((Elective), Credits: 04)

Work load: 60 hrs per semester

4 hrs/week

COURSE OBJECTIVES:

- This paper aims to describe the concepts of electronics in communication and communication techniques based on Analog Modulation, Analog and digital Pulse Modulation.
- Communication and Navigation systems such as GPS and mobile telephony system are also introduced.
- This paper will essentially connect the text book knowledge with the most popular communication technology in real world.

COURSE LEARNING OUTCOME :

At the end of the course the student is expected to have an idea/concept of the following,

- > Electromagnetic spectra and different frequency bands.
- > Modulation, different types of modulation and about super heterodyne receivers.
- > Concept of sampling, sampling theorem and multiplexing.
- > Digital transmission, encoding and decoding.
- > Satellite communication including uplinking and downlinking.
- > Mobile communication/telephony and concepts of cell telephony.
- > 2G, 3G, 4G and 5G (Quantitative).
- Apply the theory that they have learned in the theory class to gain hands on experience in building modulation and demodulation circuits; Transmitters and Receivers for AM and FM. Alsoto construct TDM, PAM, PWM, PPM and ASK, PSK and FSK modulator and verify their results.

BROAD CONTENTS OF THE COURSE:

- Electromagnetic spectra and different frequency bands.
- > Modulation, different types of modulation and super heterodyne receivers.
- Sampling, sampling theorem and multiplexing.
- Digital transmission, encoding and decoding.
- Satellite communication
- Mobile communication/telephony and concepts of cell telephony.
- > 2G, 3G, 4G and 5G (Quantitative).

SKILLS TO BE LEARNED:

- Learn the skills to understand the basic concepts of communication.
- Learn the techniques of different types of modulation of electromagnetic signals like
 - Amplitude Modulation
 - Frequency Modulation
 - Phase Modulation
 - Analog Pulse Modulation Digital Pulse Modulation
- Learn basics of satellite communication.
- Learn concepts and application of mobile telephony system.

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year BSC Physics: V Semester ELECTIVE EA-3 : COMMUNICATION ELECTRONICS ((Elective), Credits: 04)

Work load: 60 hrs per semester

4 hrs/week

DETAILED CONTENTS OF THE COURSE: *UNIT-I*

Introduction to communication – means and modes. Need for modulation. Block diagram of an electronic communication system. Brief idea of frequency allocation for radio communication system in India (TRAI). Electromagnetic communication spectrum, band designations and usage. Channels and base-band signals. Concept of Noise, signal-to-noise (S/N) ratio. **(8 Lectures)**

UNIT-II

Analog Modulation: Amplitude Modulation, modulation index and frequency spectrum. Generation of AM (Emitter Modulation), Amplitude Demodulation (diode detector), Concept of Single side band generation and detection. Frequency Modulation (FM) and Phase Modulation (PM), modulation index and frequency spectrum, equivalence between FM and PM, Generation of FM using VCO, FM detector (slope detector), Qualitative idea of Super heterodyne receiver. (12 Lectures)

UNIT-III

Analog Pulse Modulation: Channel capacity, Sampling theorem, Basic Principles-PAM, PWM, PPM, modulation and detection technique for PAM only, Multiplexing. (7 Lectures)

Digital Pulse Modulation: Need for digital transmission, Pulse Code Modulation, Digital Carrier Modulation Techniques, Sampling, Quantization and Encoding. Concept of Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK), Phase Shift Keying (PSK), and Binary Phase Shift Keying (BPSK). (8 Lectures)

UNIT-IV

Mobile Telephony System – Basic concept of mobile communication, frequency bandsused in mobile communication, concept of cell sectoring and cell splitting, SIM number, IMEI number, need for data encryption, architecture (block diagram) of mobile communication network, idea of GSM, CDMA, TDMA and FDMA technologies, simplified block diagram of mobile phone handset, 2G, 3G and 4G concepts (qualitative only).

(7 Lectures)

UNIT-V

Satellite Communication– Introduction, need, Geosynchronous satellite orbits, geostationary satellite advantages of geostationary satellites. Satellite visibility, transponders (C - Band), path loss, ground station, simplified block diagram of earth station. Uplink and downlink. **(8 Lectures)**

GPS navigation system (qualitative idea only)

DR VS KRISHNA GOVERNMENT DEGREE COLLEGE VISAKHAPATNAM B.Sc. PHYSICS SYLLABUS UNDER CBCS III Year BSC Physics: V Semester ELECTIVE EA-3 : COMMUNICATION ELECTRONICS ((Elective), Credits: 04) Work load: 30 hrs per semester – Credit:01 2 hrs/week

COURSE OBJECTIVES:

This is the laboratory component of the course on Communication Electronics (PHY DE 364P). The course objective is to Familiarize the students with basic analog communication systems. Integrate theory with experiments so that the experiments so that the students appreciate the knowledge gained from the theory course, e.g., amplitude and frequency modulation, pulse modulation.

COURSE LEARNING OUTCOME

After studying this course, the students shall be able to:

• Learn in depth concept modulation and how it is practically done in communication systems.

SKILLS TO BE LEARNED:

Get the practical idea about different ways of pulse modulation techniques

LIST OF EXPERIMENTS:

- 1) To design an Amplitude Modulator using Transistor
- 2) To study envelope detector for demodulation of AM signal
- 3) To study FM Generator and Detector circuit
- 4) To study AM Transmitter and Receiver
- 5) To study FM Transmitter and Receiver
- 6) To study Time Division Multiplexing (TDM)
- 7) To study Pulse Amplitude Modulation (PAM)
- 8) To study Pulse Width Modulation (PWM)
- 9) To study Pulse Position Modulation (PPM)
- 10) To study ASK, PSK and FSK modulators

REFERENCE BOOKS:

- 1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A.Miller, 1994, Mc-Graw Hill
- 2. Electronic Communication systems, G. Kennedy, 1999, Tata McGraw Hill.
- 3. Electronic Communication system, Blake, Cengage, 5th edition

ASSESSMENT: MARKING SCHEME

Total Marks: 50

Internal assessment: 10 marks

End term examination: 40 marks

(laboratory exam. will be conducted at the semester end).

- Laboratory Notebook: 10 Marks
- > Experimental work and data analysis: 10 Marks
- Presentation and Viva voce: 20 Marks

- 3. The question paper setters are also requested to set the questions in the following way:
- a. 50% of Questions Memory and Understanding based
- b. 30 % of Questions Application, Analysis and Skill based
- c. 20 % of Questions Creativity and Evaluation based

Dr. V.S.KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM

Semester-wise Revised Syllabus under CBCS,Course Code: Four-year B.Sc. PHYSICS ProgramDomain Subject: Physics III Year B. Sc. Physics(Mains) – Semester – V ELECTIVE EB-1 : Solar Energy and Applications Credits: 04 Max Marks: 75

I. Learning Outcomes: After successful completion of the course, the student will be able to:

1. Understand Sun structure, forms of energy coming from the Sun and its measurement.

2. Acquire a critical knowledge on the working of thermal and photovoltaic collectors.

3. Demonstrate skills related to callus culture through hands on experience

4. Understand testing procedures and fault analysis of thermal collectors and PV modules.

5. Comprehend applications of thermal collectors and PV modules.

II. Syllabus: (Total Hours: 90 including Teaching, Lab, Field Training, Unit tests etc.)

Unit - I: BASIC CONCEPTS OF SOLAR ENERGY (10hrs)

Sun Structure: Spectral distribution of solar radiation, Solar constant , zenith angle and Air- Mass, standard time, local apparent time, equation of time, direct, diffuse and total radiations.Pyrheliometer - working principle, direct radiation measurement, Pyrometer-working Principle, *Sunshine recorder*, diffuse radiation measurement, Distinction between the two meters.

Unit - II: SOLAR THERMAL COLLECTORS (10hrs)

Solar Thermal Collectors-Introduction, Types of Thermal collectors, Flat plate collector –liquid heating type, Energy balance equation and efficiency, Evacuated tube collector, collector overall heat loss coefficient, Definitions of collector efficiency factor, collector

heat-removal factor and collector flow factor, Testing of flat-plate collector, solar water heatingsystem, natural and forced circulation types. Concentrating collectors, *Parabolic trough collector* Solar cookers, Solar dryers, Solar desalinators.

Unit - III: FUNDAMENTALS OF SOLAR CELLS (10hrs)

Semiconductor interface, Types, homo junction, hetero junction and Schottky barrier, advantages and drawbacks, *Conversion of Solar energy into electricity, Photo Voltaic effect,Solar photovoltaic cell and its working principle*, equivalent circuit, output parameters, conversion efficiency, quantum efficiency, Measurement of I-V characteristics, series and shunt resistance, their effect on efficiency, Effect of light intensity, inclination and temperature on efficiency

Unit -IV: TYPES OF SOLARCELLS AND MODULES (10 hrs)

Types of solar cells, Crystalline silicon solar cells, I-V characteristics, poly-Si cells, Amorphous silicon cells, Thin film solar cells-CdTe/CdS and CuInGaSe2/CdS cell configurations, structures, advantages and limitations, Multi junction cells – Double and

triple junction cells, *Dye sensitized solar cell*. PV Module fabrication steps, Modules in series and parallel, Bypass and blocking diodes.

Unit - V: SOLAR PHOTOVOLTAIC SYSTEMS (10hrs)

Types of solar PV systems [Grid Connected ,Stand-alone Systems,Hybrid Systems],Energy storage in PV systems, Energy storage modes, electrochemical storage, Batteries, Primary and secondary, Solid-state battery, Molten solvent battery, lead acid battery and dry batteries, Mechanical storage – Flywheel, Electrical storage –Super capacitor.

ELECTIVE EB-2 : Solar Energy and Applications – Practical (lab) work (30 hrs, Max Marks:50) Credit:01

Learning Outcomes :On successful completion of this practical course, studentshall be able to:

1. List out and identify various components of solar thermal collectors and systems, solar photovoltaic modules and systems.

2. Learn the procedures for measurement of direct, global and diffuse solar radiation, I -V characteristics and efficiency analysis of solar cells and modules.

3. Demonstrate skills acquired in evaluating the performance of solar cell / module inconnecting them appropriately to get required power output.

4. Acquire skills in identification and elimination of the damaged panels without affecting the output power in a module / array.

5. Perform procedures and techniques related to general maintenance of solar thermal and photovoltaic modules.

Practical (Laboratory) Syllabus: (30 hrs) (Max.50 Marks)

- 1. Measurement of direct radiation using pyrheliometer.
- 2. Measurement of global and diffuse radiation using pyranometer.
- 3. Evaluation of performance of a flat plate collector
- 4. Evaluation of solar cell / module efficiency by studying the I V measurements.
- 5. Determination of series and shunt resistance of a solar cell / module.
- 6. Determination of efficiency of two solar cells / modules connected in series.
- 7. Determination of efficiency of two solar cells / modules connected in parallel.
- 8. Study the effect of input intensity on the performance of solar cell / module.
- 9. Study the influence of cell / module temperature on the efficiency.

10. Study the effect of cell / module inclination on the efficiency.

MODEL QUESTION PAPER COMMON FOR ALL CORE THEORYCOURSES

Max marks: 75

SECTION-A

(Essay Type Questions) Marks : 5x10M = 50M

Answer All questions with internal choice from each Unit

Time : 3 hrs

A] Explain the following: I] Solar constant, ii]zenith angle and iii] Air-Mass, & iv] standardtime, local apparent time
 2+2+2+4

OR

- B.] Explain the construction and working of Pyrheliometer?
- 2.A] Explain the construction and working of liquid heating type Flat plate collector ?and Also write advantages and disadvantages ?

OR

B] Explain natural and forced circulation types solar water heating system?5+53.A] Whatis solar cell? And explain briefly about photovoltaic effect?3+7

OR

B.] Explain the following: I]Solar cell I-V characteristics and ii]shunt resistance 6+4

OR

B.] Explain the Bypass diode and Blocking diode?

5. A] Explain the types of solar pv systems?

OR

C.] Explain the costruction and working of Lead Acid battery?

SECTION-B

(Short Answer Type Questions)

Marks : 5x5M = 25M

Answer any five out of the following ten questions

6. Draw and explain about Sun structure?

7. Define and explain about direct, diffuse and total radiations?

8. Explain construction and working of Solar desalinator?

9. Write Short note on Evacuated tube Collectors?

10. Explain the following: I] Homojunction and ii] Heterojunction

11. Discuss the steps involved to fabricate PV Module?12. What

are poly-Si cells

13.Write short note on energy storage modes?

5+5

B.Sc. PHYSICS SYLLABUS UNDER CBCS

ELECTIVE – EB-2

RENEWABLE ENERGY AND ENERGY HARVESTING

III Year B.Sc.-Physics, Semester V

Work load:60 hrs per semester

4 hrs/week

Course Objectives

• To impart knowledge and hands on learning about various alternate energy sources to teach the ways of harvesting energy using wind, solar, mechanical, ocean, geothermal energy etc. To review the working of various energy harvesting systems which are installed worldwide.

Course Learning Outcome

- The students are expected to learn not only the theories of the renewable sources of energy, but also to have hands-on experiences on them wherever possible. Some of the renewable sources of energy which should be studied here are: (i) off-shore wind energy, (ii) tidal energy, (iii) solar energy, (iv) biogas energy and (v) hydroelectricity. All these energy sources should be studied in detail.
- Learn about piezoelectricity, carbon- captured technologies like cells, batteries.
- The students should observe practical demonstrations of (i) training modules of solar energy, windenergy etc.,
 (ii) Conversion of vibration into voltage using piezoelectric materials, (iv) conversion of thermal energy into voltage using thermoelectric modules.

UNIT I: 1. Global Energy Scenario & Indian energy scenario:

Classification of energy resources, conventional energy resources, advantages, disadvantages, Origin and time scale of fossil fuels, Energy flow diagram to earth, Conventional energy sources, Role of energy in economic development and social transformation. Global Energy consumption in various sectors, projected energy consumption for the next century, Exponential increase in world's energy consumption, impact of exponential rise in energy usage on global economy. energy resources available in India- coal, oil, natural gas, nuclear and hydroelectric power, wind, solar, OTEC etc., Energy as a factor limiting growth, Need for use of renewable energy sources. (12 hours)

UNIT II: 2.Solar energy

Solar energy, its importance, storage of solar energy, solar pond, non-convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, Solar power plants, Solar cell, Types of solar cells, photovoltaic effect, Solar module and array, Components of PV system, Applications of solar PV systems. (**12 hours**)

UNIT III: 3.Wind Energy

Introduction, Principle of wind energy conversion, Components of wind turbines, Operation and characteristics of a wind turbine, wind-electric generator power plant, Advantages and disadvantages of wind mills, Applications of wind energy. (6 hours)

4. Hydrogen Energy:

History of hydrogen energy - Hydrogen production methods - Electrolysis of water, Hydrogen storage options – Compressed and liquefied gas tanks, Metal hydrides; Hydrogen safety - Problems of hydrogen transport and distribution - Uses of hydrogen as fuel. **(6 hours)**

UNIT IV: 5.Ocean Energy:

Introduction, Principle of ocean thermal energy conversion, Tidal power generation, Tidal energy technologies, Energy from waves, Wave energy conversion, Wave energy technologies, advantages and disadvantages. Closed and open type OTEC -advantages and disadvantages.

(7 hours)

6.Geothermal Energy: Introduction ,Important aspects of geothermal energy Structure of earths interior, Energy of earth-heat flux, Earthquake and volcanoes, geothermal system hot spring structure, geothermal resources, advantages, disadvantages and applications (6 hours)

UNIT V:

7.Bio-energy

Energy from biomass – Sources of biomass – Environmental effects of biomass, Conversion of biomass – biomass gasification – Introduction of biogas, Aerobic and anaerobic digestion – bio gas applications, advantages of biogas production, factors affecting generation of biogas, Biogas plants-Floating dome type(KVIC-type)&Fixed dome type(Dinabandhu model),Production of biofuels-ethanol, methanol, biodiesel and producer gas. power generation from land fill gas(LFG)and liquid waste. (11 hours)

ELECTIVE EB-2: Renewable sources Energy and Harvesting

(Elective), Credits: 04] MODEL QUESTION PAPER

Time : 3 hrs

Max marks : 75

SECTION-A

(Answer ALL of the following questions)

Marks: 5x10M = 50M

1. Explain in detail about various Renewable energy sources.

[OR]

Explain in detail about various conventional Energy reserves available in India.

2. Explain the construction and the working of a solar water heater.

[OR]

Explain the components in a solar PV system and their working.

3. Explain the components of a Horizontal axis wind turbine.

[OR]

Explain in detail about various methods for the storage of Hydrogen.

4. Explain in detail about any two wave energy technologies with neat diagrams.

[OR]

Explain in detail about the four types Geothermal energy resources.

5. Explain about various Biomass conversion technologies.

[OR]

Explain about the production of Ethanol from Biomass.

SECTION-B

(Answer Any FIVE of the following questions)

Marks : 5x5M = 25M

- 6. Draw the Energy flow diagram to the Earth.
- 7. Explain about the impact of exponential raise in Energy usage on Global economy.
- 8. Write any five applications of Solar energy.

- 9. Mention various types of solar cells.
- 10. Write the advantages and disadvantages of wind mills.
- 11. What are the advantages of Hydrogen as a fuel?
- 12. What are the advantages and disadvantages of Open and closed type Ocean Thermal energy conversion.
- 13. Explain the energy structure of Earth's interior.
- 14. Write the advantages of Anaerobic digestion.
- 15. Write a short note on power generation from Land fill gas and liquid waste.

B.SC. PHYSICS-ELECTIVE - : EB-3/ Atmospheric Physics (Credits: Theory-04, Practicals-01) Theory: 60 Lectures

COURSE OBJECTIVES:

- 1. To get acquainted with the general composition and the structure of Earth's Atmosphere and to know about the formation of winds and cyclones.
- 2. To work out with the fundamental dynamic equations due to rotation of the Earth and apply these to study various circulations and vortices of the winds.
- 3. To gain knowledge regarding the formation and the propagation of various waves in Atmosphere.
- 4. To learn about various aspects of RADAR and LIDAR and their applications.
- 5. To know about formation and detection of Aerosols using LIDAR.

LEARNING OUTCOMES :

- 1. To know about the general composition and the structure of Earth's Atmosphere and to know about the formation of winds and cyclones.
- 2. To work out with the fundamental dynamic equations due to rotation of the Earth and apply these to study various circulations and vortices of the winds.
- 3. To get acquainted with the knowledge regarding the formation and the propagation of various waves in Atmosphere.
- 4. To gain knowledge about various aspects of RADAR and LIDAR and their applications.
- 5. To comprehend about the formation and detection of Aerosols using LIDAR.

B.Sc. PHYSICS – ELECTIVE - :EB-3- ATMOSPHERIC PHYSICS / SYLLABUS (Credits: Theory-04, Practicals-02) Theory: 60 Lectures UNIT – I

General features of Earth's atmosphere: Thermal structure of the Earth's Atmosphere, Ionosphere, Composition of atmosphere, Hydrostatic equation, Potential temperature, Atmospheric Thermodynamics, Greenhouse effect and effective temperature of Earth, Local UGC Document on LOCF Physics 190 winds, monsoons, fogs, clouds, precipitation, Atmospheric boundary layer, Sea breeze and land breeze. Instruments for meteorological observations, including RS/RW, meteorological processes and different systems, fronts, Cyclones and anticyclones, thunderstorms. (12 Lectures)

UNIT – II

Atmospheric Dynamics: Scale analysis, Fundamental forces, Basic conservation laws, The Vectorial form of the momentum equation in rotating coordinate system, scale analysis of equation of motion, Applications of the basic equations, Circulations and vorticity, Atmospheric oscillations, Quasi biennial oscillation, annual and semi-annual oscillations, Mesoscale circulations, The general circulations, Tropical dynamics. (12 Lectures)

UNIT – III

Atmospheric Waves: Surface water waves, wave dispersion, acoustic waves, buoyancy waves, propagation of atmospheric gravity waves (AGWs) in a nonhomogeneous medium, Lamb wave, Rossby waves and its propagation in three dimensions and in sheared flow, wave absorption, non-linear consideration (12 Lectures)

UNIT – IV

Atmospheric Radar and Lidar: Radar equation and return signal, Signal processing and detection, Various type of atmospheric radars, Application of radars to study atmospheric phenomena, Lidar and its applications, Application of Lidar to study atmospheric phenomenon. Data analysis tools and techniques. (12 Lectures)

UNIT – V

Atmospheric Aerosols: Spectral distribution of the solar radiation, Classification and properties of aerosols, Production and removal mechanisms, Concentrations and size distribution, Radiative and health effects, Observational techniques for aerosols, Absorption and scattering of solar radiation, Rayleigh scattering and Mie scattering, Bouguert-Lambert law, Principles of radiometry, Optical phenomena in atmosphere, Aerosol studies using Lidars. (12 Lectures)

B.Sc. PHYSICS – ELECTIVE - :EB-3/ ATMOSPHERIC PHYSICS / SYLLABUS (Credits: Theory-04, Practicals-02)

PRACTICALS- Atmospheric Physics (List of practicals)

Atmospheric Physics 60 Lectures

Scilab/C++ based simulations experiments based on Atmospheric Physics problems like

1. Numerical Simulation for atmospheric waves using dispersion relations (a) Atmospheric gravity waves (AGW) (b) Kelvin waves (c) Rossby waves, and mountain waves

2. Offline and online processing of radar data (a) VHF radar, (b) X-band radar, and (c) UHF radar

3. Offline and online processing of LIDAR data

4. Radiosonde data and its interpretation in terms of atmospheric parameters using vertical profiles in different regions of the globe.

5. Handling of satellite data and plotting of atmospheric parameters using radio occultation technique

6. Time series analysis of temperature using long term data over metropolitan cities in India – an approach to understand the climate change

B.SC. PHYSICS-ELECTIVE - : EC-1 - APPLIED DYNAMICS

(Credits: Theory-04, Practicals-01) Theory: 60 Lectures

COURSE OBJECTIVES:

- 1. To get acquainted with the basic aspects of Dynamical systems
- 2. To get a basic understanding about Dynamical systems of various areas (Biology, Chemistry etc)
- 3. To know about Chaos and Fractals at a basic level.
- 4. To learn some aspects of Logistic Maps and chaos in Non-linear systems.
- 5. To comprehend with the basics of Fluid Dynamics.

LEARNING OUTCOMES:

1. To know about the basic aspects of Dynamical systems

- 2. To get acquainted with the Dynamical systems of various areas (Biology, Chemistry etc)
- 3. To know about Chaos and Fractals at a basic level.
- 4. To understand some basic aspects of Logistic Maps and chaos in Non-linear systems.
- 5. To comprehend with the basics of Fluid Dynamics.

B.SC. PHYSICS- ELECTIVE :EC-1 - ANALYTICAL DYNAMICS -SYLLABUS (Credits: Theory-04, Practicals-02) Theory: 60 Lectures

UNIT – I

Introduction to Dynamical systems:

Definition of a continuous first order dynamical system. The idea of phase space, flows and trajectories. Simple mechanical systems as first order dynamical systems : the free particle, particle under uniform gravity, simple and damped harmonic oscillator. Sketching flows and trajectories in phase space; sketching variables as functions of time, relating the equations and pictures to the underlying physical intuition.

(11 lectures)

UNIT – II

Other examples of dynamical systems:

In Biology -Population models e.g. exponential growth and decay, logistic growth, species competition, predator-prey dynamics, simple genetic circuits In Chemistry: Rate equations for chemical reactions e.g. auto catalysis, bistability In Economics: Examples from game theory. Illustrative examples from other disciplines. Fixed points, attractors, stability of fixed points, basin of attraction, notion of qualitative analysis of dynamical systems, with applications to the above examples. Computing and visualizing trajectories on the computer using software packages. Discrete dynamical systems. The logistic map as an example.

(15 Lectures)

UNIT – III

Introduction to Chaos and Fractals:

Examples of 2-dimensional billiard, Projection of the trajectory on momentum space. Sinai Billiard and its variants. Computational visualization of trajectories in the Sinai Billiard. Randomization and ergodicity in the divergence of nearby phase space trajectories, and dependence of time scale of divergence on the size of obstacle. Electron motion in mesoscopic conductors as a chaotic billiard problem. Other examples of chaotic systems; visualization of their trajectories on the computer. : Fractals in nature – trees, coastlines, earthquakes, etc. Need for fractal dimension to describe self-similar structure. Deterministic fractal vs. self-similar fractal structure. Fractals in dynamics – Serpinski gasket and DLA. (**12 Lectures**)

UNIT – IV

Chaos in nonlinear finite-difference equations- Logistic map:

Dynamics from time series. Parameter dependence- steady, periodic and chaos states. Cobweb iteration. Fixed points. Defining chaos- aperiodic, bounded, deterministic and sensitive dependence on initial conditions. Period- Doubling route to chaos. Nonlinear time series analysis and chaos characterization: Detecting chaos from return map. Power spectrum, autocorrelation, Lyapunov exponent, correlation dimension. (8 Lectures) UNIT-V

Elementary Fluid Dynamics:

Importance of fluids, Fluids in the pure sciences, Fluids in technology. Study of fluids: Theoretical approach, experimental fluid dynamics, computational fluid dynamics. Basic physics of fluids: The continuum hypothesis-concept of fluid element or fluid parcel; Definition of a fluid- shear stress; Fluid properties- viscosity, thermal conductivity, mass diffusivity, other fluid properties and equation of state; Flow phenomena- flow dimensionality, steady and unsteady flows, uniform & non-uniform flows, viscous & inviscid flows, incompressible & compressible flows, laminar and turbulent flows, rotational and irrotational flows, separated & unseparated flows. Flow visualization - streamlines, path lines, Streak lines.

(14 Lectures)

- Fluid Mechanics, 2nd Edition, L. D. Landau and E. M. Lifshitz, Pergamon Press, Oxford, 1987.

B.SC. PHYSICS PRACTICAL LAB: APPLIED DYNAMICS

60 Lectures Laboratory/Computing and visualizing trajectories using software such as Scilab, Maple, Octave, XPPAUT based on Applied Dynamics problems like

- 1. To determine the coupling coefficient of coupled pendulums.
- 2. To determine the coupling coefficient of coupled oscillators.
- 3. To determine the coupling and damping coefficient of damped coupled oscillator.
- 4. To study population models e.g. exponential growth and decay, logistic growth, species competition, predator-prey dynamics, simple genetic circuits.
- 5. To study rate equations for chemical reactions e.g. auto catalysis, bistability.
- 6. To study examples from game theory.
- 7. Computational visualization of trajectories in the Sinai Billiard.

8. Computational visualization of trajectories Electron motion in mesoscopic conductors as a chaotic billiard problem.

- 9. Computational visualization of fractal formations of Deterministic fractal.
- 10. Computational visualization of fractal formations of self-similar fractal.
- 11. Computational visualization of fractal formations of Fractals in nature trees, coastlines, earthquakes.
- 12. Computational Flow visualization streamlines, pathlines, Streaklines.

3	UNIT III	Introduction to Chaos and Fractals	2	2	30	
4	UNIT IV	Chaos in nonlinear finite- difference equations- Logistic map	2	2	30	
5	UNIT V	Elementary Fluid Dynamics	2	2	30	
	Total r	no. of Questions	10	10		
	Total Marks including Choice				150	

Note:

1. The question paper setters are requested to kindly adhere to the format given in the above table.

- 2. The question paper setters are requested to follow revised Bloom's Taxonomy model while preparing Question paper.
- 3. The question paper setters are also requested to set the questions in the following way:
- a. 75 % of Questions Memory and Understanding based
- b. 20 % of Questions Application, Analysis and Skill based
- c. 5 % of Questions Creativity and Evaluation based

BSC. PHYSICS ELECTIVE-EC-2: NUCLEAR AND PARTICLE PHYSICS

Work load: 60 hrs./ Semester

CREDIT: Theory -04 / Practical -01

COURSE OBJECTIVES

The objective of the course is to impart the understanding of the sub atomic particles and their properties. It will emphasize to gain knowledge about the different nuclear techniques and their applications in different branches Physics and societal application. The course will focus on the developments of problem-based skills.

4 hrs./ Week

COURSE LEARNING OUTCOME

- Learn the ground state intrinsic properties of a nucleus.
- Know about the nuclear models and their roles in explaining the ground state properties of the nucleus –(i) the liquid drop model (ii) the shell model.
- Learn about the process of radioactivity, the radioactive decay law, the emission of alpha, beta and gamma rays.
- Learn the basic aspects of nuclear reactions, the Q-value of such reaction and its derivation from conservation laws, The reaction cross-sections.
- Learn some basic aspects of interaction of nuclear radiation with matter- interaction of gamma ray by photoelectric effect, Compton scattering and pair production, energy loss due to ionization, Cerenkov radiation.
- Learn about the basic features of nuclear radiations.
- Gain knowledge on the basic aspects of particle Physics the fundamental interactions, elementary and composite particles, the classifications of particles.

BROAD CONTENTS OF THE COURSE

- General properties of nuclei
- Nuclear models
- Radioactive decays
- Nuclear reactions
- Interaction of nuclear radiation with matter
- Elementary particles and their properties

SKILLS TO BE LEARNED

- Skills to describe and explain the properties of nuclei and derive them from various models of nuclear structure.
- To understand, explain and derive the various theoretical formulation of nuclear disintegration like α decay, β decay and γ decays.
- Develop basic understanding of nuclear reactions and decays with help of theoretical formulateand laboratory experiments.
- Skills to develop basic understanding of the interaction of various nuclear radiation with matter in low and high energy.
- Develop basic knowledge of elementary particles as fundamental constituent of matter, their properties, conservation laws during their interactions with matter

SYLLABUS OF THE COURSE

General Properties of Nuclei: Constituents of nucleus and their Intrinsic properties: shape, mass, radii, charge, density (matter density), average binding energy and its variation with mass number, main features of binding energy curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excites states.

UNIT-II

UNIT-I

Radioactivity decay: (a) Alpha decay: basics of α -decay processes, theory of α -emission, Gamow Theory, Geiger Nuttall law. (b) β -decay: energy kinematics for β decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rays' emission & kinematics, internal conversion.

UNIT-III

Nuclear Models: Liquid drop model approach, semi empirical mass formula and significance of its various terms, condition of nuclear stability, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, residual interaction, concept of nuclear force and its properties.

UNIT-IV

Nuclear Reactions: Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct Reaction, resonance reaction.

Interaction of Nuclear Radiation with matter:

Energy loss due to ionization (Bethe-Block formula), Cerenkov radiation. Gamma ray interaction through matter, photoelectric effect, Compton scattering, pair production, neutron interaction with matter.

UNIT-V

(12 Lectures)

Particle physics: Particle interactions; basic features, Types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model, color quantum number and gluons.

Text Books

- 1. Introductory nuclear Physics by Kenneth S. Krane (Wiley India Pvt. Ltd., 2008).
- 2. Concepts of nuclear physics by Bernard L. Cohen. (Tata Mcgraw Hill, 1998).
- 3. Introduction to the physics of nuclei & particles, R.A. Dunlap. (Thomson Asia, 2004).

Reference Books

- Introduction to High Energy Physics, D.H. Perkins, Cambridge Univ. Press.
- Introduction to Elementary Particles, D. Griffith, John Wiley & Sons
- ♦ Quarks and Leptons, F. Halzen and A.D. Martin, Wiley India, New Delhi
- Solution Basic ideas and concepts in Nuclear Physics An Introductory Approach by K. Heyde (IOP- Institute of Physics An Introduc Publishing, 2004).
- ✤ Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000).
- Physics and Engineering of Radiation Detection, Syed Naeem Ahmed (Academic Press, Elsevier, 2007).
- Theoretical Nuclear Physics, J.M. Blatt & V.F.Weisskopf (Dover Pub.Inc., 1991).

(6 Lectures)

(6 Lectures)

BSC. PHYSICS ELECTIVE-EC-2 (Practical): NUCLEAR AND PARTICLE PHYSICS Work load: 30 hrs./ Semester 2 hrs./ Week

LIST OF EXPERIMENTS

Nuclear Physics Experiments (Minimum Six)

- 1. Gamma ray spectrometer calibration
- 2. Strength and energy of the unknown γ -ray source
- 3. Mass Attenuation coefficient for γ -ray.
- 4. Fermi-Kurie Plot
- 5. G.M. Counters Characteristics and dead time
- 6. The Beta ray spectrum & Feathers's analysis
- 7. G.M. counter: Inverse square law verification, Linear absorption coefficient & scattering factor determination.
- 8. Dosimeter: Inverse square law verification & Linear absorption coefficient determination.
- 9. MCA calibration using Gamma ray Sources.
- 10. MCA: Strength and energy of the unknown γ -ray source.

ASSESSMENT: MARKING SCHEME

Total Marks: 50

- Internal assessment: 10 marks
- End term examination: 40 marks (laboratory exam. will be conducted at the semester end).
- Laboratory Notebook: 10 Marks
- > Experimental work and data analysis: 10 Marks
- > Presentation and Viva voce: 20 Marks.

Dr. V.S. Krishna Govt. degree College(A), Visakhapatnam MODEL QUESTION PAPER (NUCLEAR AND PARTICLE PHYSICS) III B.Sc. Physics : SEM-V / EC-2

Time: 3 Hrs

Max. Marks: 75

SECTION – A

Answer all Questions of the following $[5 \times 10 = 50]$

- 14. (a) Explain the following: 1. Mass, 2. Radii, 3. Charge, 4. Matter density and 5. Average binding energy.[OR]
 - (b) Describe the main features of binding energy curve and N/A plot?
- 15. (a) Explain the Gamow theory of α -decay process?

[OR]

- (b) Discuss positron emission, electron capture and neutrino hypothesis in β -decay.
- 16. (a) Explain the Liquid drop model of an Atomic nucleus?

[OR]

(b) Explain the Shell model of Atomic Nuclei.

17. (a) Derive an equation for the Q-value of the nuclear reaction. Also mention the types of Reactions.

[OR]

(b) Explain the photoelectric effect, Compton scattering and pair production.

18. (a) Discuss the following Conservation Laws: parity, baryon number, Lepton number with examples.

[OR]

(b) Explain the concept of quark model.

SECTION – B

Answer any <u>FIVE</u> Questions [5 X 5 = 25]

- 19. Describe the electric quadrupole moment.
- 20. Explain the nuclear excites states.
- 21. Discuss the Geiger Nuttall law.
- 22. Write any five properties of nuclear forces.
- 23. What are the types of nuclear reactions.
- 24. Explain the Cerenkov radiation.
- 25. Write a short note on elementary particles.
- 26. Explain the Law of conservation of Isospin.

B.SC. PHYSICS-ELECTIVE - : EC-3 ADVANCED MATHEMATICAL PHYSICS-I (Credits: Theory-04, Practicals-01) Theory: 60 Lectures – Practical: 30 sessions COURSE OBJECTIVES:

- 1. To get acquainted with the basic aspects of Linear Vector Spaces.
- 2. To get a basic understanding about Matrices.
- 3. To know and work out the problems involving the applications of the Matrices.
- 4. To learn some elementary aspects of Cartesian Tensors as well as that of tensorial formulation of Analytical Solid Geometry
- 5. To comprehend with the applications of General Tensors in physics.

LEARNING OUTCOMES:

1. To know about the basic aspects of Linear Vector Spaces.

- 2. To get acquainted with Matrices and their operations.
- 3. To know and work out the problems involving the applications of the Matrices.
- 4. To understand some basic aspects of Cartesian Tensors as well as that of tensorial
- 5. formulation of Analytical Solid Geometry.
- 6. To comprehend with the applications of General Tensors in physics.

The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.

UNIT -I

Chapter – I :

Linear Vector Spaces: Abstract Systems. Binary Operations and Relations. Introduct

ion to Groups and Fields. Vector Spaces and Subspaces. Linear Independence and Dependence of Vectors. Basis and Dimensions of a Vector Space, Inner Product, Change of basis. Homomorphism and Isomorphism of Vector Spaces. Linear Transformations. Algebra of Linear Transformations. Non-singular Transformations. Representation of Linear Transformations by Matrices.

(10 Lectures)

UNIT-II

Chapter -II

Matrices: Addition and Multiplication of Matrices. Null Matrices. Diagonal, Scalar and Unit Matrices. Upper-Triangular and Lower-Triangular Matrices. Transpose of a Matrix , Rank of a Matrix, Linear Simultaneous equations, Symmetric and Skew-Symmetric Matrices. Conjugate of a Matrix. Hermitian and Skew-Hermitian Matrices. Singular and Non-Singular matrices. Orthogonal and Unitary Matrix. Trace of a Matrix, Determinant of a Matrix. (10 Lectures)

UNIT-III

Chapter- III

Matrix Applications : Eigen-values and Eigenvectors. Cayley- Hamilton Theorem. Diagonalization of Matrices. Solution of Coupled Linear Ordinary Differential Equations. Functions of a Matrix (10 Lectures)

-+

UNIT-IV

Chapter -IV

Cartesian Tensors: Transformation of Co-ordinates. Einstein's Summation Convention. Relation between Direction Cosines. Tensors. Algebra of Tensors. Sum, Difference and Product of Two Tensors. Contraction. Contravariant, Covariant and Mixed Tensors, Quotient Law of Tensors. Symmetric and Anti-symmetric

Tensors. Invariant Tensors: Kronecker and Alternating Tensors, Permutation Tensors. Association of Antisymmetric Tensor of Order Two and Vectors. Vector Algebra and Calculus using Cartesian Tensors : Scalar and Vector Products, Scalar and Vector Triple Products. Differentiation. Gradient, Divergence and Curl of Tensor Fields. Vector Identities.

(10 Lectures)

Chapter-V

Tensorial Formulation of Analytical Solid Geometry: Equation of a Line. Angle Between Lines. Projection of a Line on another Line. Condition for Two Lines to be Coplanar. Foot of the Perpendicular from a Point on a Line. Rotation Tensor (No Derivation). Isotropic Tensors. Tensorial Character of Physical Quantities. Moment of Inertia Tensor. Stress and Strain Tensors: Symmetric Nature. Elasticity Tensor. Generalized Hooke's Law. (10 lectures)

UNIT-V

Chapter-VI

Applications of Tensors & General Tensors in Physics: Four Vectors in Special theory of relativity:: Scalars and Vectors in four dimensional spacetime, Lorentz Transformation of coordinates, transformation of a Fourvector, Minkowski Space and its properties. Covariant formulation of Electro dynamics:: Lorentz Guage, Electromagnetic field strength Tensor, Maxwell equations, Transformation of Electromagnetic fields. Quotient Law of Tensors. Metric Tensor. (10 Lectures)

Dr. V.S. KRISHNA GOVERNMENT DEGREE COLLEGE (A), VISAKHAPATNAM V SEMESTER END EXAMINATION ACADEMIC YEAR – 2022-2023 / FEBRAURY 2023 III B.SC. PHYSICS – EC3

TITLE : Advanced Mathematics (MODEL PAPER)

DURATION::3 hrs

SECTION-A

Answer ALL the questions Of the following

MAX.MARKS :: 75

(5 X 10 = 50 M)

- 1. A) Show that the set of all real polynomials of x of degree not more than n is a Vector Space over the field of Real numbers. What is the dimension of this space?
 - B) Show that the functions that vanish at the end points x = 0 and x = L form a vector space.

[OR]

A) Find whether the following Matrices represent a rotation about an axis or a reflection about

a plane. $\begin{bmatrix} 0 & -1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & -1 \end{bmatrix}$ and $\begin{bmatrix} 0 & 0 & -1 \\ 0 & -1 & 0 \\ -1 & 0 & 0 \end{bmatrix}$; Also find the equations for the axis of

rotation or the Plane.

B) Find the resultant transformation for the following equations using Matrix representations.

$$\begin{cases} x' = \frac{2x+y+2z}{3} \\ y' = \frac{x+2y-2z}{3} \\ z' = \frac{2x-2y-z}{3} \end{cases} \qquad \begin{cases} x'' = \frac{2x'+y'+2z'}{3} \\ y'' = \frac{-x'-2y'+2z'}{3} \\ z'' = \frac{-2x'+2y'+z'}{3} \end{cases}$$

- 2. A) Find the Rank of the matrix $\begin{bmatrix} 2 & 2 & 2 & 3 \\ -2 & 8 & 2 & -5 \\ 0 & 10 & 4 & 9 \end{bmatrix}$.
 - B) Obtain the conditions in terms of Determinants i) for four points to lie in a plane ii) for three concurrent lines to lie in a plane.

[OR]

A) show that the following class of n X n matrices are simultaneously symmetric and orthogonal.

$$A_{\alpha\beta} = \left(\frac{2}{n+1}\right)^{1/2} \sin\left(\alpha\beta \ \frac{\pi}{n+1}\right).$$

- B) Show that the Trace and the Determinant of any Matrix are invariant under an Unitary change of Basis.
- 3. Given A = $\begin{bmatrix} 0 & 2 & -1 \\ 2 & 5 & -6 \\ -1 & -6 & 8 \end{bmatrix}$, i) Obtain a matrix B such that $B^3 = A$; ii) Obtain the matrix C such that $C = A^{81}$, iii) a Matrix D such that $A^4 D = I$.

[OR]

Find the Characteristic frequencies and the Characteristic Modes of Vibration for system of masses

and ideal springs with the array 2k, m, k, 5m, 10k. (k is spring constant and m is mass)

- 4. A) Find the Covariant and the corresponding Contravariant Metric Tensors for the three dimensional Euclidean space in cylindrical polar coordinates. [4M]
 - B) Find the Covariant and the corresponding Contravariant Metric Tensors for the three

dimensional Euclidean space in Parabolic coordinates. [6M]

[OR]

Show that the only isotropic tensor of rank 2 in a three-dimensional Euclidean space is a constant Multiple of the Kronecker delta.

5. A) Show that A(i, j, k) a set of N^3 functions whose inner product with a symmetric Contravariant tensor of rank two yields a Contravariant tensor of rank one is a Tensor of Contravariant rank one and covariant rank two.

B) Rewrite the given equation in a proper Tensorial form giving explanation A(i, l, k, p) $B_{lj}^p + C(j, k, l, m) D_l^{im} + E(i, j)F_k = 0.$

Consider the Transformation

 $x^0 = r \cosh \Psi$, $x^1 = r \sin \theta \cos \phi \sinh \Psi$, $x^2 = r \sin \theta \sin \phi \sinh \Psi$ &

 $x^3 = r \cos \theta \sinh \Psi$ from the coordinates ($x^0 x^1 x^2 x^3$) to (r, θ , ϕ , ψ) in Minkowski space. Find the Metric Tensor for both the coordinate systems.

SECTION-B

Answer any FIVE questions of the following $(5 \times 5 = 25 \text{ M})$

- 6. Show that the dimensionality of a space equals n_{\perp} , the maximum number of mutually orthogonal vectors in it.
- 7. Explain about Homomorphism and Isomorphism of Vector spaces with suitable examples.
- 8. Show that a Triangular Matrix which is either Hermitian or Unitary is a diagonal Matrix.
- 9. If $|A\rangle$ is a nonzero column vector, Show that the Matrix I $(2/\langle \tilde{A} | A \rangle) A \tilde{A}$ is symmetric and diagonal.
- 10. Write all the Pauli spin half Matrices. Mention the basis. Show that these are Hermitian Matrices. Find the Eigen values and Eigen vectors of all the Pauli spin half Matrices.
- 11. If H is a Hermitian Matrix, Show that $U = e^{i H}$ is a Unitary Matrix. Show also that determinant of the Matrix $U = e^{i Trace(H)}$
- 12. Show that the second derivatives of a scalar field f, that is, $A_{ij} = \frac{\partial^2 f}{\partial x^i \partial x^j}$, are not the components of a second rank tensor.
- 13. Let the direction cosines of the barred cartesian coordinate system with respect to the unbarred system be $\frac{1,1,1}{\sqrt{3}}$, $\frac{1,-2,1}{\sqrt{6}}$, $\frac{1,0,-1}{\sqrt{2}}$. Given three vectors $A_i = (1, 1, 1)$, $B_i = (1, 1, 0)$, $C_i = (1, 0, 1)$,

Find $A_i B_i C_i$ and $\overline{A}_i \overline{B}_i \overline{C}_i$ second order tensor of rank two.

- 14. Show that the Kronecker delta is a symmetric mixed tensor of rank two.
- 15. If B^k is an arbitrary tensor and $A_{ij} B^k$ is a tensor, show that A_{ij} is a tensor

#
